Investment / Performance Objectives & policy

The fund mainly invests, either directly or through derivatives, in European and US equities. The fund may also invest significantly in government and corporate bonds and money market instruments. Specifically, the fund normally invests at least 45% of total net assets in equities and equity-related instruments, including convertible bonds, that are traded or issued by companies that are located, or do most of their business, in Europe or the USA. The fund may invest assets in debt and debt-related instruments, including money market instruments, denominated in any currency. Some of these investments may be below investment grade with a minimum rating of B-/B3. The fund does not invest in asset-backed securities or contingent convertible bonds (coco bonds), but may be indirectly exposed to them (maximum 10% of total net assets). Non-EUR investments are usually hedged to EUR. The fund may use derivatives for reducing risks (hedging) and costs, and to gain additional investment exposure.

Investment Manager Commentary

Performance and Investment Choices

At the beginning of May, following a further recovery in share prices, equity exposure was reduced to about 59%; this level was also confirmed during June. Based on the latest available accounting data, there were 20 replacements in June, 5 in Europe and 15 in the US. Specifically, 9 stocks were replaced due to deteriorating fundamentals, 4 were sold following the triggering of stop-loss levels and 7 were removed after price rises made them less attractive. At the end of June, the portfolio's expected dividend yield fell slightly in relative terms and was approximately 43.3% higher than that of the benchmark indices. The portfolio's free cash flow yield rose slightly and is currently around 50.8% higher than the benchmark level. The Active Share of the equity component remained stable at around 82.74%. The total turnover (purchases and sales) of the equity component resulting from investment decisions taken during the month was approximately 23.13%. In the coming months, the Fund will continue to pursue both its stock-picking and dynamic contrarian allocation investment strategies in equities. Should prices recover, equity exposure could be reduced; conversely, should prices fall, equity exposure could be increased.
