Investment risks

For complete information on risks, refer to the legal documents. The value of investments and any income will fluctuate (this may partly be the result of exchange rate fluctuations) and investors may not get back the full amount invested. Debt instruments are exposed to credit risk which is the ability of the borrower to repay the interest and capital on the redemption date. Changes in interest rates will result in fluctuations in the value of the fund. The fund uses derivatives (complex instruments) for investment purposes, which may result in the fund being significantly leveraged and may result in large fluctuations in the value of the fund. The fund may invest in distressed securities which carry a significant risk of capital loss. The fund may invest in contingent convertible bonds which may result in significant risk of capital loss based on certain trigger events.

Fund Strategy

The fund holds a diversified portfolio of investment grade bonds with a small allocation to non-financial corporate high yield bonds. The largest allocation by sector remains financials with further notable holdings in non-financial hybrid bonds (bonds that have some equity like characteristics). To benefit from the additional yield available the fund also has an allocation to US dollar denominated bonds. The currency exposure from these bonds is hedged back to euros.

Past performance does not predict future returns. The performance period shown here starts on the last day of the first indicated month and ends on the last day of the last indicated month.
