The synthetic risk indicator shows the level of risk of this product compared to others. It indicates the probability that this product will suffer losses in the event of market movements or our inability to pay you.

We have classified this product in risk class 2 of 7, which is a low risk class. This means that potential losses from future product performance are low and, should market conditions deteriorate, it is very unlikely that our ability to pay you will be affected.

Other important risk factors not adequately covered by the indicator :

Credit risk: Risk of deterioration in credit quality or risk of default by an issuer that could negatively impact the price of the assets in the portfolio.

Liquidity risk: Risk linked to the low liquidity of the underlying markets, which makes them sensitive to significant buying and selling movements.

Impact of techniques such as derivatives: The use of derivatives can amplify the impact of market movement effects on the portfolio.

# Glossary

## Carbon intensity

The Carbon Intensity of the portfolio is defined as the weighted sum of the carbon intensities of the underlying assets in the portfolio.

## Science Based Targets initiative (SBTi)

Science Based Targets initiative is an international climate action organisation that develops standards, tools and advice that enable companies to set greenhouse gas (GHG) emission reduction targets based on climate science and what is needed to reach the target of net zero by 2050 at the latest.

Target Set: Corporate targets are clearly defined and science based programmes to reduce greenhouse gas (GHG) emissions that have been reviewed and validated by SBTi. The objectives of these undertakings are expressed by temperature alignments.

Committed: Commitments represent a company's intention to develop objectives and submit them for validation within 24 months. These companies do not yet have targets validated by SBTi.

## SFDR articles

Article 6: the financial product does not necessarily promote ESG characteristics or have specific sustainable investment objectives.

Article 8: the financial product promotes certain environmental and social characteristics.

Article 9: the financial product has sustainable investment objectives.

## Green share

Share of sales of underlying assets contributing to transition.

## Category "transition to a low carbon economy"

This indicator classifies companies according to their exposure to the risks and opportunities associated with the transition to a low-carbon economy.

The different categories are :

Asset Stranding: assets that lose value due to unfavourable market developments (legislation, environmental constraints, technological disruptions) that cause significant devaluation (e.g. companies owning coal mines);

Operational transition: a company facing increased operating costs due to carbon taxes or having to make significant investments to implement solutions to reduce their greenhouse gas emissions (e.g. cement producers);

Product offering in transition: a company facing a decline in demand for carbon-intensive products and having to shift its product offering towards products compatible with a low-carbon economy (e.g. the automotive sector);

Neutral: a company with low exposure to increases in operating costs/capital expenditure associated with the transition to a low-carbon economy (e.g. the healthcare sector);

Solutions: a company that provides products or services that are expected to benefit from the transition to a low-carbon economy (e.g. renewable energy power producers).
