

DNB FUND DISRUPTIVE OPPORTUNITIES RETAIL A (EUR)

ISIN: LU2061961145. BLOOMBERG TICKER: DDSORAE LX. WKN: A2PS58

Fund Objective and Policy

The Sub-Fund aims to achieve a positive relative return over the long-term principally through investments in equities of companies driven by disruptive changes. These companies will be operating typically within communications services, information technology, financial services, health care, renewable energy or energy efficiency sectors. The most common drivers behind the disruptions that the fund is aiming to capitalize from are coming from changes in regulation, technology and consumer behaviour. Geographically, the Sub-Fund has full flexibility.

The Sub-Fund promotes, among other characteristics, environmental or social characteristics, and the companies in which the investments are made follow good governance practices in accordance with article 8 of SFDR.

The Sub-Fund is Actively Managed. The Sub-Fund's benchmark index is MSCI World Index Net. The chosen benchmark MSCI World Index Net is a standard benchmark reflecting the broad investment universe relevant for the Sub-Fund. The Sub-Fund's benchmark index is also used for the calculation of the performance fee. The Sub-Fund does not track the benchmark index and can deviate significantly or entirely from it.

Fund vs. index performance

Past performance does not predict future returns.

Performance disclaimer

The performance quoted is past performance and is not a guarantee of future returns. Future returns will e.g. depend on market developments, the manager's skill, the fund's risk, as well as the costs of subscription, management and redemption. The principal value of an investment will fluctuate so that an investor's shares, when sold or redeemed, may be worth more or less than the original cost. Current performance: www.dnbam.com

Inclusion criteria (positive screening)

The fund invests in companies

Voting

A way of influencing companies in a positive direction is by voting at general meetings. Our voting guidelines for Norway state that we shall vote at all Norwegian general meetings for listed companies we have ownership in, and we have adopted a systematic approach to determining which global companies meetings we will vote at.

Standard setting

Standard setting is an important element of active ownership. As part of this, we develop and publish expectation documents within important areas, which we use to contribute to the improvement of standards in the market, and to form the basis of engagements with companies:

International Norms and standards

ESG data is incorporated into the portfolio management system, and is used to assess ESG risks and opportunities in investment decision-making.

Dialogues

Company dialogues may be undertaken to discuss specific ESG incidents (reactive), or to improve companies general performance in regards to ESG risks and opportunities (proactive).

The detailed Responsible Investment Policy and the Corporate Exclusion List are available at:
<https://dnbam.com/en/responsible-investments/esg-overview-dnb-funds>

Water

Anti corruption

Climate change

Environment

Human rights

Tax

Gender equality

Oceans

Biodiversity

DNB FUND DISRUPTIVE OPPORTUNITIES RETAIL A (EUR)

ISIN: LU2061961145. BLOOMBERG TICKER: DDSORAE LX. WKN: A2PS58

Risk considerations (Generally speaking, every investment presents a risk of loss of capital.)

Company risk

The risk that something will happen to one or more companies in which the fund have invested causing those investments to lose value.

Concentration risk

The risk that a negative event or shift in a particular sector or geography to which the fund's investments are exposed causing those investments to lose value.

Systematic risk

The risk that e.g. an economic shocks or political instability in the market in which the fund invests causing all of the fund's investments to lose value.

Liquidity risk

The risk that one or more of the fund's investments could become hard to value, or to sell at a desired time and price.

Currency risk

The risk that a negative change in a currency to which the fund is exposed causing these currency denominated investments to lose value.

Further investment risks are set out in the risk warnings chapter in the prospectus.

Glossary

Alpha

Alpha shows the percentage performance of a fund above or below that explained by its exposure to the broader market.

Beta

Beta shows the average extent a fund's return moves relative to the broader market. A fund with a beta above 1 moves on average more than the market and below 1 moves on average less than the market.

Cut-off

Deadline for remittance of orders to the transfer agent in Luxembourg as set out in the relevant annexes to the prospectus. You may be required to submit your orders to your financial advisor or fund distributor by an earlier cut-off time.

Correlation and annualised volatility

Correlation shows how a fund's return moves in relation to the benchmark. Highly correlated investments tend to move up and down together while this is not true for investments with low correlation. Standard deviation or annualised volatility is a measure of historical volatility. It is calculated by comparing the average return with the average variance from that return.

Inception date

The inception date is the date taken into account for the start of performance calculation. On the launch date, all assets were transferred to the current sub-fund in exchange for shares of the current sub-fund.

Maximum drawdown

The largest loss measured from peak to trough until a new peak is attained.

NAV

An acronym of net asset value.

Ongoing charges (OCR)

Ongoing charges are based over 12 months of expenses ending the 31 December of the previous year. It is annually updated, but may be adjusted more frequently.

Sharpe ratio

The Sharpe ratio shows the fund's risk-adjusted performance. It is calculated by dividing the excess return (portfolio return minus risk free return) by the volatility.

SRI

The Summary Risk Indicator is a guide to the level of risk of this product compared to other products. The risk of the product may be significantly higher if held for less than the recommended holding period.

Standard deviation

Standard deviation or annualised volatility is a measure of historical volatility. It is calculated by comparing the average return with the average variance from that return.

Swing pricing

Swing pricing is an anti-dilution technique which protects long term investors from the direct and indirect costs of capital activities in the fund. The long-term performance of the fund is maintained with this solution.

Tracking error

The volatility of the fund's excess returns over its benchmark returns. It quantifies how closely a manager's return pattern follows that of the benchmark.

Important information

This document is a marketing communication. Please refer to the prospectus of the UCITS, the KID, semi-annual and annual report, and the summary of investor rights before making any final investment decision.
