Global Technology Fund

bluebox

Investment Theme—Direct Connection

The Direct Connection of computers to the real world has enabled the technology revolution of the past 15 years, driving an acceleration in tech adoption simultaneously across all industry verticals. With every other industry investing its excess returns in technology, we expect the IT sector to continue to outperform the broader market as it steals the growth from the rest of the economy, though this is subject to regulatory and macroeconomic risks. The Fund focuses on the companies enabling Direct Connection, giving it exposure to the most exciting developments in the sector without needing to chase over-hyped themes or invest in over-valued stocks.

Fund Objective

The Fund's principal objective is to seek long term capital growth by investing globally at least 70% of its total assets in the equity securities of companies whose predominant economic activity is in the technology sector. The Fund is active and managed without any reference to a benchmark.

- ¹ Performance based on Share Class S since launch 29.03.2018 **ISIN LU1793347128.**
- ² S&P Global BMI IT INDEX is Net Total Return, calculated since launch of BBGT on 29.03.2018.

The Fund was launched under Share Class S, with Management Fee of 1% until December 2020, 0% Management Fee since. The Share Class is closed to new investors.

The fund performance is **not** measured against the benchmark. This is for information purposes only. Performance is of a USD share class, on net of fees basis, with gross income reinvested. Source: at 31/08/2025. Performance related data will display only where relevant to the share class inception date. The value of an investment and the income from it can fall as well as rise and you may not get back the amount originally invested.

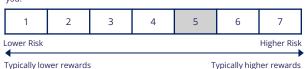

Equity Risk: The risk that investments depreciate because of stock market dynamics.

Market Risk: The Fund's assets may decrease because of sovereign acts and political transformation, which may also influence free trade of currency. In addition, risks may arise because of restricted information possibilities in addition to less stringent supervision and control of certain markets. The performance of these markets may be subject to significant volatility. The concentration of the Fund on a given country implies the risk that the events concerning the given country may significantly and negatively affect the value of the whole portfolio of the Fund.

Risk Indicator (PRIIPS SRI)

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you.

The risk indicator assumes you keep the product for 5 years. The actual risk can vary significantly if you cash in at an early stage and you may get back less. You may not be able to cash in early. You may not be able to sell your product easily or you may have to sell at a price that significantly impacts on how much you get back.

Medium-high risk class. This rates the potential losses from future performance at a medium-high level, and poor market conditions will likely impact our capacity to pay you.

Be aware of currency risk. In some circumstances, you may receive payments in a different currency, so the final return you will get may depend on the exchange rate between the two currencies. This risk is not considered in the indicator. A complete description of risk factors is set out in the Prospectus in the section entitled 'Risk Factors Annex'.

Willam de Gale's Monthly Comment

June quarter reporting drew to its close during August, but provided little direction for the Technology sector, which ended the month virtually flat. This was despite considerable interference in the semiconductor industry by the US government, discussed below. The BlueBox Global Technology Fund was down 0.6% in August, leaving it up 18.4% year to date.

The portfolio's weakest holdings during the month were Tokyo Electron (-22%), Intuit (-15%), Applied Materials (-10%) and Advanced Micro Devices (-8%); while the outperformers were led by Monolithic Power Systems (+18%), Analog Devices (+12%), Texas Instruments (+12%) and Alphabet (+11%). We made no significant changes to the fund's holdings during the month.

The importance of the semiconductor industry to global geopolitics was once again highlighted. It is arguable that semis represent both the greatest strength and weakness of the US in its attempt to fend off China's challenge to its global dominance. By preventing Chinese companies from accessing leading-edge chip technology, the US is aiming to hobble its competitor's technology, defence and AI At the same time, China threatens Taiwan and thus the vast majority of the world's leading-edge logic chip capacity in the form of TSMC's fabs on the island. Trump administration in August attempted to address both these points by applying rather crude pressure to two of its own chip companies.

Having banned the export even of downgraded AI chips to China a few months earlier, the Trump administration suddenly reversed course and relaxed the embargo, but imposed a tax of 15% of revenue for such exports. The Chinese government responded by discouraging its companies from buying US AI chips. Meanwhile Intel has apparently agreed to give the US government a 10% stake in itself in order to receive CHIPS Act subsidies that had already been allocated to it, but not yet paid. Intel is the only US-based competitor to TSMC in leading-edge logic and is thus a potential "national champion", but it is so far behind TSMC that even Federal backing is unlikely to close the gap and may actually hinder its efforts if political pressures outweigh business considerations. As a result we aren't tempted to invest in Intel, and TSMC remains one of our largest holdings, as the world's dominant producer of the most sophisticated chips.

Whatever the next disruptive theme is going to be, it will rely on many of the same key enabling technologies, including leading-edge semiconductors. We continue to focus on the providers of those key technologies, as they are likely once again to be the main beneficiaries of disruption, stealing almost all the profit growth from the rest of the market, as they have done since 2007. These very profitable enablers remain the main engine of earnings growth globally, giving BlueBox investors exposure to the strongest technology trends, without the absurd valuations and poor business models of many of the highprofile, but profitless, disrupters.

The charges are the fees the Fund charges to investors to cover the costs of running the Fund. Additional costs, including transaction fees, will also be incurred. These costs are paid out by the Fund, which will impact on the overall return of the Fund. Fund charges will be incurred in multiple currencies, meaning that payments may increase or decrease as a result of currency exchange fluctuations.

The Ongoing Charges Figure (OCF) is an amount representing all operating charges and expenses of the Fund in the prior 12 months as a percentage of the Fund's average net assets for the period. Where that figure would not be a fair representation of future costs or if 12 months data is not available, an estimated figure will be shown.

Important Information

SFDR Disclosure

The BlueBox Global Technology Fund is classified as an Article 8 fund under SFDR, promoting social characteristics by investing in technology companies that drive innovation, efficiency, and resilience. The fund applies ESG integration, exclusions, and screening as binding elements of its investment strategy to ensure alignment with these characteristics.

For further details, please refer to the prospectus and www.blueboxfunds.com/technology-fund#documents.

The prospectus, the Key Information Document, the articles of association as well as the annual and semi-annual reports may be obtained free of charge from the representative. Current share prices are available on www.fundinfo.com. The paying agent in Switzerland is REYL & Cie Ltd. Rue du Rhône 4. CH-1204 Geneva.

The Morningstar Rating TM for funds, or "star rating", is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The Morningstar Rating does not include any adjustment for sales loads. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. BlueBox Global Technology Fund was rated against the following numbers of Technology Equity funds over the following time periods: 1,007 funds in the last three years, 613 funds in the last five years. Past performance is no guarantee of future results.

The Morningstar® Sustainability Rating TM is intended to measure how well the issuing companies or countries of the securities within a fund's portfolio are managing their financially material environmental, social and governance, or ESG, risks relative to the fund's Morningstar Global Category peers. Morningstar assigns Sustainability Ratings by combining a portfolio's Corporate Sustainability Rating and Sovereign Sustainability Rating proportional to the relative weight of the (long only) corporate and sovereign positions.
