Investment Managers' reports

Performance table

For each of the sub-funds that form a part of Man Funds plc, details of their performance returns during the financial period ended 30 June 2025 are tabulated below.

The individual share classes for which we have reported the performance figures on this page have been selected by the respective investment managers, as their investment manager commentaries throughout this section of the financial statements best reflect the performance of these particular share classes.

To an extent, the investment managers' reports also incorporate their views and analysis on the other share classes belonging to their portfolios, however the performance return for these other share classes during the financial period may differ to what is reported in this subsection of the unaudited financial statements.

For any sub-funds which launched part way throughout the financial period, the information tabulated below represents performance from the date of launch to 30 June 2025:

Sub-fund	Share class	Share Class Return	Benchmark	Benchmark(s) Return

Investment Managers' reports (continued)

Man Global Convertibles - Semi-Annual Report Commentary

Market summary

The first two quarters of 2025 were characterised by significant volatility, primarily driven by U.S. trade policy and tariff announcements. Markets were generally down in 1Q, particularly U.S. equities which were hit by uncertainty surrounding new tariffs. European equities outperformed, supported by domestic spending and diversification benefits. Fixed income (bond) markets saw gains as recession fears increased, with government treasury bond yields declining. 2Q saw a sharp sell-off initially following "Liberation Day" tariffs, but markets quickly rebounded as trade tensions eased. Central banks, especially the European Central Bank (ECB), began cutting interest rates while the US Federal Reserve remained cautious. Overall, 2Q ended with positive returns for most asset classes. Against this backdrop, convertible bonds performed very well during the period in review, delivering returns ahead of both global equities and fixed income.

Performance review¹

The Fund delivered a total return of 7.46% over the period, outperforming the benchmark index which added 7.33%.

Market timing and stock selection contributed to returns over the first 6 months of the year, while regional allocation detracted slightly. On a regional basis gains were led by positioning and stock selection in Asia and stock selection in the U.S. On a sector basis, gains were led by positioning and stock selection in Consumer Discretionary, positioning in Technology and stock selection in Utilities. Conversely, stock selection in Technology and Materials detracted.

On a relative basis, the top performing single name contributor was an underweight (relative to the index) in PG&E Corporation, while overweights in Quanta Computer and Uber also performed well. An underweight in Spotify was the fund's largest detractor, while an overweight in Sarepta and an underweight in Xiaomi also detracted. The Fund's equity delta, which measures how much a portfolio's value will change relative to stock market movements, stood at 45.4% at the end of the period versus the benchmark index at 45.1%. The average Yield to Maturity/Price (YTM/P), a measure that compares the expected annual return of a convertible bond to its current price, at period end was -2.54% while that of the index read -2.93%. Global convertible bond new issuance totaled \$70bn in the first half of 2025, led by the U.S. (\$48bn) and Asia (\$15bn).

Future outlook

In our analysis, convertible bonds continue to present an attractive investment opportunity following a solid start to the year. Market quality continues to improve with more high-quality bond issuances, while strong new bond volumes have helped balance the market. The market's balanced stock sensitivity supports its ability to capture upside gains while limiting downside losses - convertible bonds have participated well in stock market gains this year while showing resilience during market declines.

Several positive factors support the market: expected interest rate cuts should strengthen bond value floors, while exposure to growth themes (particularly Al and technology) and potential merger activity could boost returns. Key risks include high market valuations amid geopolitical tensions, narrow risk premiums, and refinancing needs with 25% of bonds maturing within 18 months. However, in our analysis, the market's strong structure and defensive characteristics position it well for uncertain times.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Certain indices/measures mentioned on this page have been provided for information purposes only. They are intended to provide a comparative indication of particular asset classes, investment sectors, or financial markets more widely ("market backdrop"). Unless indicated otherwise, the investment process of the Sub-Fund is independent of these indices/measures.

The organisations and/or financial instruments mentioned are for reference purposes only. The content of this material should not be construed as a recommendation for their purchase or sale.

² Performance data is shown net of fees with income reinvested, as at 30 June 2025, and does not take into account sales and redemption charges where such costs are applicable. Returns are calculated net of (up to) 1.35% management fees and 20% performance fees for Man Global Convertibles DL USD share class. Other share classes may charge higher fees. The FTSE Global Focus Convertible (Hedged) Index is the benchmark index for the Fund. Please consult the Prospectus or Key Information Document ('KID') for more information.

Investment Managers' reports (continued)

Man Japan CoreAlpha Equity - Semi-Annual Report Commentary

Market summary¹

The performance of global equities in Q1 was defined by the uncertainty surrounding the Trump administration's policies. Against this backdrop, the yen strengthened, and the performance of Japanese equities was muted for much of Q1. As President Trump then aggressively expanded his tariff policy in the closing days of March, global equities declined further. The Nikkei 225 Index, a price-weighted index which tracks the largest 225 countries listed on the Japanese stock exchange, entered a technical correction (a drop of 10% or more from a recent high).

Volatility in markets was then amplified in Q2. While the Japanese equity market ultimately closed the period in positive territory, this outcome does little to illustrate the significant volatility experienced by global equity markets. The tariffs proposed by the Trump administration on April 2nd, were much worse than the vast majority had anticipated. For Japan, a 25% tariff on automobiles and 24% on all other goods exported to the US. Given Japan's economy is heavily dependent on economic cycles and international trade, the market then sold off further. The Nikkei 225 Index experienced its third-largest fall on record on April 7th, declining over 26%. Japan's top negotiator, Akazawa, visited the US on multiple occasions but there was still no sign of a deal on tariffs, political uncertainty continued, and core Consumer Price Index (CPI), a measure of inflation that tracks the average change in prices of goods and services that consumers buy for daily living, remained well above the 2% target. But regardless of this, the Japanese equity market continued to recover well. The Nikkei 225 Index closed above 40,000 (JPY), reaching a YTD high, and TOPIX² in dollar terms rallied to a new all-time high.

Performance review

Amid this backdrop, Man Japan CoreAlpha Equity achieved gains of 2.30%³ over the period, underperforming the benchmark index, which delivered a return of 3.83%⁴.

The narrow, trend-driven market seen in recent years continued through the first half of 2025, with investors continuing to favour the same small group of stocks during volatile periods. Market leaders included previous winners like defense and gaming stocks, a naturally challenging environment for the portfolio, given its strategy of buying unpopular stocks that others are selling (contrarian philosophy). Being underweight in companies like Mitsubishi Heavy Industries, Nintendo and Hitachi hurt performance. However, over the period, the portfolio performed roughly in line with the market, helped by a strong first quarter driven mainly by gains in financial and real estate stocks.

Another detractor was the overweight exposure to the auto sector and global blue-chip exporters, both of which remain in the eye of the global tariff storm. With little clarity on the US-Japan trade negotiations and concerns around competition from China, exporters generally did not recover in the same fashion as the wider market, with some of the nation's highest quality exporters still trading close to 10-year valuation lows. The auto sector in Japan remains one of the most contrarian areas of the market and valuations remain at historical lows. An underweight position in pharmaceuticals, which are also under threat of potential tariffs and pricing controls, however, was a positive contributor to portfolio performance.

Governor Ueda has stated that if underlying inflation converges toward its 2% target, the Bank of Japan (BoJ) will continue to increase interest rates. In early 2025, in response to a more cautious tone from the Bank of Japan suggesting possible rate increases, the yen strengthened and the 10-year Japanese government bond interest rate (yield) rose above 1.5% for the first time since 2009. The outperformance of the bank sector continued. But following the events of Liberation Day and given the US tariff uncertainty and the potential impact on the Japanese economy, the consensus view that the BoJ would likely slow the pace of potential rate hikes developed in Q2. Against this backdrop, after a strong start to the year, the bank sector underperformed. Underweight positions in Japan's two largest megabanks, Mitsubishi UFJ and Sumitomo Mitsui Financial Group, were beneficial to portfolio performance in Q2.

In the opening months of the year, real estate was a key positive contributor, supported by the activist investor presence, but also thanks to improving sentiment towards the strong Tokyo property market. Given the volatile environment experienced by the equity market at the start of the second quarter of the year, the performance of domestic, defensive stocks was initially strong, and exposure to Japanese real estate developers and railway companies was generally positive for the relative performance of the portfolio in April.

As the period under review came to an end, global equity market momentum was then supported by the outperformance of technology stocks, especially semiconductor and Al-related companies. With a strategic stake in Arm Holdings as well as investments in Open Al and Stargate, the share price of SoftBank Group increased over 80% from the April low, with notable strength in June. As a top 10 position for the portfolio, this was a major positive for strategy performance.

Investment Managers' reports (continued)

Man Japan CoreAlpha Equity - Semi-Annual Report Commentary (continued)

Future outlook

Corporate management are generally optimistic on Japan and the shift from deflation to reflation. However, the inflationary environment remains very unpopular with the Japanese public who are experiencing the cost-of-living implications. This negative sentiment has weighed on the popularity of the Liberal Democratic Party (LDP). An overweight position in real estate remains, but as the investment team are now less enthused by the domestic reflation story, profits were taken on other domestic-focused stocks including railways, construction, and housing stocks.

The investment team rather see an opportunity in global blue-chip exporters, whose valuations have declined sharply. They are involved in robots, machinery and factory automation, areas with a good long-term future and an area of excellence for Japan. They are quality companies with strong financial positions and strong market positions. The investment team believe tariff-related concerns unveiled an opportunity in quality names whose valuations have been weathered by global economic uncertainty. Positions in Shin-Etsu, Fanuc, Murata Manufacturing and Yaskawa were therefore increased.

Moving forward, contrarianism may well have more relative influence on the fund than simply the performance of Japan Value. If we see a rotation away from momentum Value, towards contrarian Value as well as these attractively valued, laggard Growth stocks, then we believe the fund should benefit.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Man Systematic Emerging Markets Equity - Semi-Annual Report Commentary

Market summary1

The post-US election optimism, which started fading in December, continued to decline throughout Q1 2025. Although the quarter began with some lingering market enthusiasm, challenges like slower growth, inflation, and tariffs gradually overshadowed hopes for reduced regulation and tax cuts. While the MSCI World Index, which tracks the global stock markets as a whole, saw a modest decline of 1.8% for the quarter, this figure masked weakness in US assets. If we disaggregate the MSCI World Index returns into regions, MSCI USA was -4.6% during the quarter, compared to 10.5% for MSCI Europe and 0.3% for MSCI Japan (all in USD terms). The dollar index fell 3.9% during the quarter, partially reversing its 7.7% surge in Q4. From a factor performance perspective, the market underwent a significant shift from pro-risk to anti-risk midway through the quarter, as the Trump tariffs moved from concept to reality.

In emerging market equites, unpredictability reigned supreme throughout the first quarter. Discussion of increased tariffs from the incoming US administration drove increased concerns over heightened inflation in the US. Emerging market equities outperformed their developed market counterparts led by both a technology-led resurgence in Chinese equities as well as a weaker US dollar. This trend continued through March, as broader tariff threats, weaker consumer spending data, and aggressive federal job cuts in the US fuelled investor concerns about a potential recession.

On April 2nd, 2025, post market close, the Trump administration announced, "Liberation Day". This news substantially increased stock market volatility in the subsequent days, to a level that exceeded its 2008 Global Financial Crisis peak. Remarkably, pessimism in the markets was short-lived, as overall risk appetite for the second quarter of 2025 turned quickly pro-risk. After a brief peak to trough drop of -11.3% for the MSCI World Index from April 3rd to April 8th, markets rallied and never looked back. Overall, the Index returned a stunning 11.5% for the second quarter, its best quarter since the fourth quarter of 2020. If we disaggregate the MSCI World Index returns into regions, we see very similar returns across regions during the quarter. The dollar index continued its decline, returning -7.0% for the quarter, and is now -10.7% YTD. From a factor performance perspective, in an almost inverse narrative from the first quarter of 2025, the market's significant shift from anti-risk to pro-risk occurred mid-April, as the initial fear of extreme tariff rates subsided. Correspondingly, the momentum factor (factors are outcomes provided by algorithmic models which undertake mass data analysis), which has been aligned with the general market direction recently, saw good performance for the quarter. Value, meanwhile, exhibited its typical negative correlation with momentum, and struggled.

Emerging market equities also experienced extreme bouts of volatility, driven by the initial shock of 145% US tariffs on Chinese imports. Emerging market countries outside of Asia were less impacted by the headline announcements and proved more resilient, as the MSCI Emerging Markets Index gained 1.3% for the month of April. May saw strong equity market performance, driven by a host of factors including easing trade tensions, robust US earnings growth, and improved consumer sentiment. US equities led developed markets, while a weaker US dollar boosted emerging markets, led by strong performance within Taiwan and Korea. Broader emerging market equities also gained as easing trade tensions reduced recession fears, and investors sought opportunities in higher-growth regions. China's equity performance, while positive, was more moderate compared to other emerging market regions as lingering concerns over a necovering economy held back returns. Global stocks maintained their momentum through June, shrugging off escalating Middle East tensions marked by US strikes on Iran's nuclear sites. Though crude oil saw temporary spikes, prices subsided as Tehran signalled restraint. Emerging market equities proved particularly resilient, with the MSCI EM benchmark surging over 6% (USD) for the month.

Performance review

Against this backdrop, Man Systematic Emerging Markets Equity returned 16.48% over the period, outperforming against the benchmark, which returned 15.29%.

Man Numeric, the fund manager of the fund, seeks to add value through a fundamentally driven, quantitative, bottom-up stock selection process. Stocks are selected based on the output of our quantitative investment models. The Fund had positive model performance overall for the year-to-date period. All models had positive performance, with the Informed Investor leading the way, followed by Quality, Momentum Academic+, Momentum Innovation, Factor Selection, Value Innovation, and Value Academic+.

Stock selection amongst sectors was positive, led by positive stock selection within Industrials and Financials. Sector allocation was also positive for the period with an overweight to the Consumer Discretionary and underweight to Energy sectors contributing.

Stock selection among countries contributed to performance. Stock selection was the most positive in South Korea and China (offshore). The Fund's country allocation was flat for the period. An overweight to South Korea contributed and an overweight to Thailand detracted.

At the security level, the Fund's top three contributors were all South Korean firms, two in Industrials and one in Energy. The Fund's top three detractors were an Indian Consumer Discretionary firm, Indian Financials firm, and a South Korean Industrials firm.

Investment Managers' reports (continued)

Man Systematic Emerging Markets Equity - Semi-Annual Report Commentary (continued)

Future outlook

Looking ahead to the second half of 2025, we expect ongoing geopolitical dynamics to continue to shape the market environment and factor landscape. In the US, tariffs could make inflation stickier (where inflation remains high and doesn't easily decrease) and impact expected interest rates, in turn impacting the US dollar and therefore emerging markets. As we do not invest based on top-down views and instead focus on specific, stock selection. We strive to remain agnostic to the overall market environment by focusing on continuous research into new diversifying signals and risk management techniques. Our goal, as always, is to build balanced, well-diversified portfolios that can navigate market inflections and volatility. With this in mind, we will not rest on our laurels but instead remain focused on improving our process to best manage the risks, known and unknown, that lie ahead.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Investment Managers' reports (continued)

Man Global Emerging Markets Local Currency Rates - Semi-Annual Report Commentary

Market summary¹

In the first half of 2025, emerging market government bonds in local currencies delivered a strong 12.3% return, mainly due to broad US dollar weakness. Performance was driven primarily by 6.5% in currency gains, as sentiment towards US assets deteriorated amid policy uncertainty and US Federal Reserve criticism. This was complemented by bond price gains (2.6%) and interest income (2.8%).

Most emerging market currencies strengthened against the dollar, with European and Latin American currencies leading gains - Hungarian forint, Polish zloty and Brazilian real were top performers. Only Turkish lira, Indonesian rupiah and Indian rupee weakened. The average local interest rate fell 0.38% to 6.01%, though emerging markets underperformed US bonds as the gap versus 5-year USUS Treasuries widened. Latin America led regional performance, with investment funds adding \$1.7bn to emerging market local currency bonds.

Despite positive performance, the period was marked by elevated uncertainty across trade, fiscal, monetary policies, and geopolitics. Markets were initially shocked by President Trump's April 2 'reciprocal' tariff announcement. While some tariffs remained, most were suspended pending negotiations. The US and China reached temporary agreements reducing tariff rates.

Key geopolitical developments included limited Ukraine-Russia peace progress, a severe Pakistan-India conflict in May ending with ceasefire, and a US-brokered Israel-Iran ceasefire in June.

Political changes across emerging markets included increased opposition pressure in Turkey, nationalist victories in Poland, initial market turbulence then stability in Romania, budget approval amid coalition tensions in South Africa, and government instability in Thailand.

On monetary policy, Brazil, Turkey and Uruguay raised interest rates significantly, while Mexico, India, Thailand, Indonesia, Czech Republic, Poland, South Africa, and Peru cut rates. Other emerging market central banks kept rates unchanged.

Performance Review²

Against this backdrop, the Fund returned 11.40%3 net of fees, underperforming its benchmark which returned 12.26%.

Performance was hurt by being underweight (relative to the benchmark) in Thailand, which performed well as interest rates fell 0.63% to 1.70%, and Turkey, where bonds underperformed but the fund still lost money from missing out on interest income. Similarly, Colombia's bonds underperformed but the fund lost from missing interest income. Currency positioning also hurt returns, particularly being underweight in Polish zloty which strengthened 14.3%, and betting against Israeli shekel which appreciated 6.1%.

Positive contributions came from overweight positions in Mexico and Brazil, which were top performers as interest rates fell significantly, along with US Treasury exposure which outperformed local bonds by 0.20%. Overweight positions in Brazilian real and Mexican peso added value as these currencies strengthened, as did being underweight in Turkish lira, which weakened 11.1%.

As of June 30, the fund was overweight in Mexico and Brazil and held US Treasuries. Mexico offers attractive 9.2% yields (income return on bonds) with slowing inflation, while Brazil's 13.6% yields offer high real returns reflecting fiscal concerns. The fund remained underweight in low-yielding markets like China and Thailand, where negative spreads to US bonds, meaning these bonds pay less interest than equivalent US Treasury bonds, offer limited upside and insufficient income.

On currencies, the fund was 11.7% underweight overall. Key positions included overweights in Brazilian real (reduced after strong performance) and Malaysian ringgit (added in May, despite tariff risks, due to supportive policy and repatriation flows). The fund was underweight in Polish zloty, Chilean peso, Colombian peso, South African rand, Turkish lira, and Israeli shekel due to various valuation, political, and geopolitical concerns.

Future outlook

The emerging market debt outlook faces challenges from US policy uncertainty and geopolitical risks, despite improving US-China trade relations.

For short-term interest rates, emerging market central banks can still cut rates since real interest rates remain positive and domestic economies are weak, supporting lower inflation. US dollar weakness has created opportunities for rate cuts in higher-yielding markets like Mexico, Colombia, and India, though this is limited by the Federal Reserve keeping rates steady due to persistent US inflation.

For long-term bonds, rising emerging market debt levels and interest rate pressures resulted in bonds being less attractive, with the 2.22% extra yield over safe US bonds offering little protection against US interest rate volatility, especially in low-yielding Asian markets like China and Thailand.

Investment Managers' reports (continued)

Man Global Emerging Markets Local Currency Rates - Semi-Annual Report Commentary (continued)

Future outlook (continued)

On currencies, emerging market fundamentals remain supportive despite Asian growth vulnerability to tariffs, given attractive real interest rates, healthy trade balances, and compelling valuations in select high-yielding currencies. Given US policy uncertainty and strong year-to-date gains, reducing winning positions appears prudent.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Investment Managers' reports (continued)

Man Global Emerging Markets Bond - Semi-Annual Report Commentary

Market summary1

In the first half of 2025, emerging markets government bonds in US dollars returned 5.5%. Performance was primarily driven by investors demanding lower risk premiums (2.0% spread return – the extra yield these bonds pay above US government bonds), complemented by a 1.0% US Treasury return. The average yield (income return) fell by 0.30% to 7.29%, while the average risk premium (the extra interest rate received in return for the risk) remained almost flat at 2.95%.

Risk premiums widened gradually from historic lows until April, when heightened recession fears after Liberation Day pushed them to yearly highs. Subsequently, reduced tensions from the US and May's pause on China's ultra-high tariffs led markets to price in lower recession risks, supporting risk premium compression. High-yield bonds outperformed investment grade bonds, returning 6.2% versus 4.9%, benefiting more from tighter risk premiums and being less impacted by rising long-term interest rates.

Despite positive performance, the period was marked by elevated uncertainty across trade, fiscal, monetary policies, and geopolitics. Markets were initially shocked by President Trump's April 2 announcement of 'reciprocal' tariffs that exceeded worst-case scenarios. While some tariffs remained, most were suspended pending 90-day negotiations. Following retaliatory exchanges, the US and China reached a temporary agreement on May 14, reducing effective tariff rates. June negotiations in London produced a framework agreement on critical materials.

Key geopolitical developments included limited progress on Ukraine-Russia peace talks, a severe Pakistan-India conflict in May that ended with a ceasefire, and a US-brokered Israel-Iran ceasefire announced by President Trump on June 23.

Political changes across emerging markets included increased pressure on opposition figures in Turkey, nationalist victories in Poland and initial far-right success in Romania (later reversed), budget approval in South Africa amid coalition tensions, government instability in Thailand, and a decisive presidential victory in Ecuador.

Performance Review

In the first half of 2025, the Fund returned 5.71% net of fees², outperforming its benchmark by 0.23%³.

The main positive drivers included Mexico government bonds (bought when prices were attractive in April, then sold for gains as valuations became expensive), US Treasury exposure, good bond selection in investment grade countries like Indonesia, Saudi Arabia and Romania, and avoiding underperformers like China and Turkey. Negative performance came from being underweight in high-yield countries like Venezuela and Nigeria, which performed well.

As of June 30, 2025, the fund was positioned to be less sensitive to interest rate changes than its benchmark, with approximately 1.1% less price movement for each 1% change in interest rates. The fund held US Treasury bonds while being underweight in overvalued Asian and Middle Eastern investment-grade countries. In February, the fund reduced US Treasury exposure to lock in gains. In May, it added longer-term US Treasury exposure when yields rose.

Given tight emerging market risk premiums by historical standards, the portfolio maintained lower exposure to credit risk than its benchmark by holding fewer bonds from riskier issuers that were at risk of default. Country positions were actively managed throughout the period:

Key moves included:

- January: Increased the portfolio's sensitivity to interest rate changes early in the month by buying longer-term US Treasuries
 and emerging market government bonds like Saudi Arabia. Later in the month, as yields fell, profits were taken on the US
 Treasury positions that had been added.
- February: Reduced Hungary exposure after strong performance, added Romania
- April: Added exposure to undervalued long-term emerging market bonds, increased positions in Mexico, Brazil, Romania, and Indonesia
- May: Rotated from Pemex (Mexican state-owned oil company) to Mexico government bonds, reduced Turkey underweight
- June: Reduced Colombia position, added Turkey exposure, then took profits; halved Ecuador position after strong performance

Future outlook

The emerging market debt outlook remains challenging due to persistent US policy uncertainty and elevated geopolitical risks, even as US-China trade tensions show signs of moderation.

Given these conditions, we continue to advocate a cautious approach to emerging market government bond risk premiums while seeking targeted opportunities in select markets. Government finances have worsened significantly since 2023, with rising debt levels and continuing budget deficits creating increased vulnerability, particularly if US interest rates rise.

¹ Bloomberg as at 30 June 2025.

² Performance data is shown net of fees with income reinvested, as at 30 June 2025, and does not take into account sales and redemption charges where such costs are applicable. Returns are calculated net of 1.25% management fee for the D C USD share class. Other share classes may charge higher fees. JP Morgan EMBI Global Composite Index is the reference benchmark for this Sub-Fund. Please consult the Prospectus or Key Information Document ('KID') for more information.

³ Bloomberg as at 30 June 2025.

Investment Managers' reports (continued)

Man Global Emerging Markets Bond - Semi-Annual Report Commentary (continued)

Future outlook (continued)

Current emerging market risk premiums appear tight at 2.95%, offering limited profit potential given weakening economic fundamentals. This technical tightness, combined with the risk of widening risk premiums should the US experience slow growth with high inflation, reinforces our cautious outlook for the asset class.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Certain indices/measures mentioned on this page have been provided for information purposes only. They are intended to provide a comparative indication of particular asset classes, investment sectors, or financial markets more widely ("market backdrop"). Investment Managers' reports (continued)

Man Pan-European Equity Growth - Semi-Annual Report Commentary

Market review

Political risks weighed on market sentiment at the start of the year, particularly France's budget dynamics and the German elections. Much of the focus during the period under review was on the impact of policies adopted by the new US administration, most notably the "liberation day" announcement of US reciprocal tariffs that led to significant volatility in equity markets. The impact of these policies led to positive developments in Europe, such as the German parliament's boost to defence and infrastructure spending, resulting in the European equity market outperforming the US in the first half of calendar 2025.

Performance review

Against this backdrop, Man Pan-European Equity Growth returned -2.83%11, which underperformed the benchmark return of 8.55%.

The first half of the year saw us reduce our holdings in L'Oréal (January/February), Novo Nordisk (March) and ASML (June). Each of these represented less than 5% of the portfolio at the end of June, creating portfolio space to accommodate expanded holdings in SAP, Ferrari, Belimo and Rational, each of which represented more than 5% of the Fund at the end of June. Ryanair's share price strength also allowed us to treat the position as a source of funds, even though it remains the Fund's largest holding. Five new positions were introduced to the portfolio during the first half of the year, namely Ambu, Argenx, Novonesis, Prada and Air Liquide. Conversely, ASM International, Schneider Electric, Puma, LVMH and London Stock Exchange Group were sold. The Fund consisted of 25 holdings at the end of June.

The main contributors to positive performance were Ryanair, Belimo and Arm. Too many names underperformed to offset this contribution, most notably Novo Nordisk, Vitrolife, Watches of Switzerland Group and Rational which caused most harm to the Fund's performance in the first half of 2025. Europe's outperformance versus the US was led by banks, insurers, telecoms and defence names, areas where the portfolio has zero presence.

Novo Nordisk's share price fall reflects both the company's loss of momentum in the US obesity market and questions about how Novo Nordisk ensures a growth path beyond semaglutide's (Anti-diabetic medication) loss of exclusivity early next decade. While these concerns are valid, and the company's holding in the portfolio has been reduced, Novo Nordisk's competitive strengths and leadership position in the structurally growing diabetes and in our analytsis, obesity markets are expected to continue to drive a double-digit annualised percentage expansion in its sales and profits well into the next decade.

Ryanair enjoyed a strong share price performance during the period under review. While profits after tax declined by 16% in the financial year to end-March 2025 on the back of lower fares and higher costs per passenger, passenger numbers increased by 9% to 200 million, with a further 5% increase likely in FY26. The upward pressure on costs is likely to relent in FY26, thanks to both lower locked in fuel costs and tighter control of crewing ratios, accompanied by an expected rise in average fares.² Demand is exceeding supply in the European short-haul airline sector, and it is the team's view that Ryanair's formidable competitive strengths, including a strong financial position, can drive an advance in its market share, profits and cash flows over the coming five years and beyond. Another positive contributor was Belimo, a new addition to the portfolio. It is the global market leader in the development and production of field devices for the regulation and control of heating, ventilation and air conditioning (HVAC) systems. Belimo announced strong first quarter numbers for FY25 and reported a materially improved outlook for the financial year. Group sales grew by 23.6% year-on-year to the end of Q1 2025, with all regions exceeding management expectations, most notably the Americas. Although the strength of Belimo's numbers is broad-based, the company is also benefitting from the successful commercialisation of its next generation data centre cooling solutions.

Future outlook

The unpredictability of today's business climate will always steer us toward those companies which present track records of controlling their own destinies. The portfolio favours companies which continue to invest in innovation, underpinning their differentiation and pricing power. These are critical qualities today when faced with US tariffs and an appreciating euro, hurdles which can be overcome through competitiveness, in the form of superior products and but also manufacturing scale efficiencies, supply chain agility and global distribution.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Certain indices/measures mentioned on this page have been provided for information purposes only. Man Systematic Europe - Semi-Annual Report Commentary

Market summary

The post-US election optimism, which started fading in December, continued to decline throughout Q1 2025. Although the quarter began with some lingering market enthusiasm, challenges like slower growth, inflation, and tariffs gradually overshadowed hopes for reduced regulation and tax cuts. While the MSCI World Index saw a modest decline of 1.8% for the quarter, this figure masked weakness in US assets. If we disaggregate the MSCI World Index returns into regions, MSCI USA was -4.6% during the quarter, compared to 10.5% for MSCI Europe and 0.3% for MSCI Japan (all in USD terms). The dollar index fell 3.9% during the quarter, partially reversing its 7.7% surge in Q4. From a factor performance perspective, the market underwent a significant shift from pro-risk to anti-risk midway through the quarter, as the Trump tariffs moved from concept to reality.

While US equities struggled in the first quarter amid fading post-election optimism, European equities delivered robust returns, marking a striking reversal after years of underperformance. The MSCI Europe Index outpaced the S&P 500 by a remarkable margin of 14.8% in US dollar terms during Q1-a rare occurrence that underscores the strength of the European market rally. Several factors have contributed to the rally in European markets. As concerns about higher consumer prices and an economic slowdown grow, investors are adopting a more defensive stance. This trend has made European equities particularly attractive, given their relative discount to US peers. Additionally, European leaders' commitment to an unprecedented military spending plan, prompted by the US's reduced role as a global security guarantor, has significantly bolstered the outlook for European stocks. This initiative is expected to drive increased spending and economic growth, further enhancing investor confidence in the region's equity markets. On April 2nd, 2025, post market close, the Trump administration announced, "Liberation Day". This news drove the VIX Index to 52.3% in the subsequent days, a level that exceeded its 2008 Global Financial Crisis peak. Remarkably, pessimism in the markets was short-lived, as overall risk appetite for the second quarter of 2025 turned quickly pro-risk. European stock markets experienced a strong rebound in the second quarter, recovering from early April's tariff-related selloff. A decomposition of the rebound indicates that it was largely fuelled by an expansion in valuation rather than earnings growth. The second quarter was marked by significant market volatility related to tariff chaos. President Trump's tariff announcements on April 2nd far exceeded economist and market expectations, triggering sharp declines in European markets, which were particularly vulnerable due to their high level of trade with the US. Although markets rebounded after the April 9th announcement of a 90-day pause on reciprocal tariffs (excluding China), substantial uncertainty continued to dominate the market. As the quarter progressed into May and June, the stock market recouped its earlier loss on optimism that the worst effects of tariffs may be avoided, despite lingering economic concerns.

Performance review

Against this backdrop Man Systematic Europe (the 'Fund') returned 6.37% net-of-fees in Euros and underperformed against its benchmark, the MSCI Europe (EUR, NDTR), by 2.18% 2.

Overall model performance for the Fund was positive for the year to date, with mixed performance from the three main models. The strategy models use quantitative analysis, producing outcomes using algorithmic analysis of mass data. The Fundamental Themes Model was positive, with the Industry Dynamics and Investor Insight signals producing the most positive returns. The ESG model produced negative returns, with the governance signal detracting the most. The Climate model was down for the period driven mainly by the Brown Green Revenue signal—a measure that tracks the revenue mix between environmentally harmful "brown" industries (like fossil fuels) versus environmentally friendly "green" industries (like renewable energy).

From a sector perspective, stock selection and sector allocation were negative. Stock selection within the Industrials and Health Care sectors detracted the most, while selection within Financials and Consumer Staples sectors contributed the most. Within sector allocation, an underweight (relative to the benchmark) to the Financials sector detracted from performance.

From a country perspective, negative stock selection detracted from returns. Most notable was the negative selection in Germany and Spain. The Fund's country allocation was positive, with an overweight in Norway and Austria contributing to performance.

From an individual stock standpoint, the Fund's overweight holdings in a Norwegian Industrial firm, an overweight to a French Financials firm, an underweight to a French Consumer Discretionary were the most significant contributors. The three stocks that detracted the most from performance were underweights in a German Industrials firm, a overweight in a Danish Consumer Discretionary firm and an underweight in a Spanish Financials company.

Future outlook

Looking ahead to the second half of 2025, we expect ongoing geopolitical dynamics to continue to shape the market environment and factor landscape. As we do not invest based on top-down views and instead focus on specific, stock selection, we strive to remain agnostic to the overall market environment by focusing on continuous research into new diversifying signals and risk management techniques. Our goal, as always, is to build balanced, well-diversified portfolios that can navigate market inflections and volatility. With this in mind, we will not rest on our laurels but instead remain focused on improving our process to best manage the risks, known and unknown, that lie ahead.

¹ Performance data is shown net of fees with income reinvested, as at 30 June 2025, and does not take into account sales and redemption charges where such costs are applicable. Returns are calculated of (up to) 1.40% management fees for Man Systematic Europe D C EUR share class. Other share classes may charge higher fees. MSCI Europe (EUR, NDTR) is a reference benchmark for this Sub-Fund. Please consult the Prospectus or Key Information Document ('KID') for more information.

Man Systematic China A Equity - Semi-Annual Report Commentary

Market summary1

The post-US election optimism, which started fading in December, continued to decline throughout Q1 2025. Although the quarter began with some lingering market enthusiasm, challenges like slower growth, inflation, and tariffs gradually overshadowed hopes for reduced regulation and tax cuts. While the MSCI World Index, an index which tracks stock performance across major developed countries worldwide, saw a modest decline of 1.8% for the quarter, this figure masked weakness in US assets. If we disaggregate the MSCI World Index returns into regions, MSCI USA was -4.6% during the quarter, compared to 10.5% for MSCI Europe and 0.3% for MSCI Japan (all in USD terms). The dollar index fell 3.9% during the quarter, partially reversing its 7.7% surge in Q4. From a factor performance perspective, the market underwent a significant shift from pro-risk to anti-risk midway through the quarter, as the Trump tariffs moved from concept to reality.

In emerging market equites, unpredictability reigned supreme throughout the first quarter. Discussion of increased tariffs from the incoming US administration drove increased concerns over heightened inflation in the US. Emerging market equities outperformed their developed market counterparts led by both a technology-led resurgence in Chinese equities as well as a weaker US dollar. This trend continued through March, as broader tariff threats, weaker consumer spending data, and aggressive federal job cuts in the US fuelled investor concerns about a potential recession.

On April 2nd, 2025, post market close, the Trump administration announced, "Liberation Day". This news substantially increased stock market volatility in the subsequent days, to a level that exceeded its 2008 Global Financial Crisis peak. Remarkably, pessimism in the markets was short-lived, as overall risk appetite for the second quarter of 2025 turned quickly pro-risk. After a brief peak to trough drop of -11.3% for the MSCI World Index from April 3rd to April 8th, markets rallied and never looked back. Overall, the Index returned a stunning 11.5% for the second quarter, its best quarter since the fourth quarter of 2020. If we disaggregate the MSCI World Index returns into regions, we see very similar returns across regions during the quarter. The dollar index continued its decline and is now -10.7% YTD. From a factor performance perspective, in an almost inverse narrative from the first quarter of 2025, the market's significant shift from anti-risk to pro-risk occurred mid-April, as the initial fear of extreme tariff rates subsided. Correspondingly, the momentum factor (factors are outcomes provided by algorithmic models which undertake mass data analysis), which has been aligned with the general market direction recently, saw good performance for the quarter. Value, meanwhile, exhibited its typical negative correlation with momentum, and struggled.

Emerging market equities also experienced extreme bouts of volatility, driven by the initial shock of 145% US tariffs on Chinese imports. Emerging market countries outside of Asia were less impacted by the headline announcements and proved more resilient, as the MSCI Emerging Markets Index gained 1.3% for the month of April. May saw strong equity market performance, driven by a host of factors including easing trade tensions, robust US earnings growth, and improved consumer sentiment. US equities led developed markets, while a weaker US dollar boosted emerging markets, led by strong performance within Taiwan and Korea. Broader emerging market equities also gained as easing trade tensions reduced recession fears, and investors sought opportunities in higher-growth regions. China's equity performance, while positive, was more moderate compared to other emerging market regions as lingering concerns over a recovering economy held back returns. Global stocks maintained their momentum through June, shrugging off escalating Middle East tensions marked by US strikes on Iran's nuclear sites. Though crude oil saw temporary spikes, prices subsided as Tehran signalled restraint. Emerging market equities proved particularly resilient.

Performance review

Against this backdrop, Man Systematic China A Equity returned -8.51% over the period, slightly outperforming against the benchmark, the MSCI China A Index which returned -8.86%.

Man Numeric, the fund manager of the fund, seeks to add value through a fundamentally driven, quantitative, bottom-up stock selection process. Stocks are selected based on the output of our quantitative investment models. The Fund's model performance was positive overall for the year-to-date period. The Factor Selection model was the best performing model followed by positive performance from the Quality, Informed Investor, Momentum Innovation, Value Innovation, and Momentum Academic+. Value Academic+ was the negative for the half year.

Stock selection was positive, led by positive stock selection within the Consumer Discretionary and Industrials sectors. Sector allocation was flat for the period. An underweight to the Consumer Staples sector detracted, while an underweight to the Energy sector contributed.

At the security level, the Fund's top three contributors were two Consumer Discretionary firms and one Financials firm. The Fund's three largest detractors were three Information Technology firms.

Future outlook

Looking ahead to the second half of 2025, we expect ongoing geopolitical dynamics to continue to shape the market environment and factor landscape. In the US, tariffs could make inflation stickier (where inflation remains high and doesn't easily decrease) and impact expected interest rates, in turn impacting the US dollar and therefore emerging markets. As we do not invest based on top-down views and instead focus on specific, stock selection, we strive to remain agnostic to the overall market environment by focusing on continuous research into new diversifying signals and risk management techniques.

Investment Managers' reports (continued)

Man Asia (ex Japan) Equity - Semi-Annual Report Commentary

Market summary1

The MSCI AC Asia ex Japan index, which tracks stock performance across Asian developed and emerging markets excluding Japan, delivered returns of 1.01% (EUR) during the first half of 2025, although the period was marked by heightened levels of volatility as markets digested the implications of President Trump's policymaking.

Index performance in Q1 was more muted compared to the second quarter, with China initially leading the way on emergence of DeepSeek – a low-cost Al model that could deliver equivalent results to ChatGPT – and the renewed commitment from policymakers to boost consumption and support private enterprises.

Q2 was defined by the initial disruption of 'Liberation Day', and the subsequent relief of trade tensions as US reciprocal tariffs were temporarily walked-back. In April, the announcement of US reciprocal tariffs led to a sharp selloff in regional equity markets, with the index falling by nearly 11% on concerns higher trade duties would spur lower levels of growth and higher rates of inflation. However, by the end of April, these losses had completely reversed, following a 90-day pause for many of America's major trading partners and news of US-China. The standout country performer over the period was South Korea, as anticipation around fiscal expansion and capital market reform drove larger than expected gains upon the election of new market-friendly President Lee Jae Myung.

Performance review

The Fund generated a positive net return of 2.30% over the period, outperforming the benchmark which returned 1.01%3.

Positive excess returns were predominately driven by stock selection, led by strong contributions from companies listed in China and South Korea. This was partially offset by holdings in India and Indonesia.

The key contributors to returns at a stock-level included:

- Innovent Biologics: China, healthcare
- Xiaomi: China technology
- SK Hynix: South Korea, technology

The key detractors from returns at a stock-level included:

- Aurobindo Pharma: India, healthcare
- Parade Technologies: Taiwan, technology
- Techtronic Industries: Hong Kong SAR, industrials

Future Outlook

Looking ahead, it is our view that Asia ex Japan is providing some compelling opportunities. While China's "anti-involution" policy—efforts to reduce excessive competition and overproduction in industries—is encouraging from a market confidence perspective, we remain broadly skeptical that production-focused measures alone can drive the necessary economic rebalancing without consumer spending reforms. We believe this policy change is coming however and stress the importance of being positioned correctly ahead of this chiff

Similarly, history suggests that Southeast Asia looks well positioned as we move into a weaker USD environment. Intriguingly, FX rates in the region have not strengthened to the same extent as other Asian currencies (e.g. TWD and KRW) or those in the G10, meaning benefits to local markets remain largely unrealised.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Certain indices/measures mentioned on this page have been provided for information purposes only. Investment Managers' reports (continued)

Man Systematic US High Yield - Semi-Annual Report Commentary

Market summary

During the first quarter of 2025, US credit (bond) markets painted a mixed picture. The ICE BofA US High Yield (HY) Index posted total returns of +0.95% falling short of Investment Grade returns.¹. These gains were largely driven by returns from falling interest rates, but they were dampened by negative contributions from credit spreads, which widened significantly over the quarter. HY credit spreads—the extra interest rate that high-yield (junk) bonds must pay above safer government bonds to compensate investors for higher default risk—rose from 2.92% at the start of the quarter to 3.55% by March, reflecting weaker credit conditions and growing macro uncertainties.

The second quarter of 2025 was marked by pronounced volatility, as shifting trade policy and macroeconomic uncertainty drove sharp moves in credit spreads and investor sentiment. Early turbulence gave way to a strong rebound as policy risks receded, but persistent concerns around fiscal management and inflation kept markets cautious. The HY Index returned +3.57% in the second quarter, reversing the trend of the first quarter and outperforming Investment Grade.

Performance review

Against this backdrop, the Man Systematic US High Yield Fund (the "Fund") returned 3.77% over the period, underperforming its benchmark, the ICE BofA US High Yield Index, which returned 4.55%.

Overall model performance for the six-month period was positive in two of the five model pillars. The Informed Investor pillar produced the most positive returns, followed by the Quality pillar, while the Factor Selection, Momentum and Value pillars were negative for the period. The model uses quantitative analysis to produce factor outcomes (pillars) provided by algorithmic analysis of mass data. Within Informed Investor, equity informed strategies were positive while credit informed strategies were mixed. The Quality pillar experienced positive contributions from probability of default models while debt sustainability signals detracted. In Factor Selection, our non-linear model combination signal (combination of multiple investment models allowing the capture of nuanced relationships between different factors and market conditions.) was additive, however negative performance from our style momentum and dynamic model allocation signals drove the pillar to finish negative for the period. Within Momentum, negative performance from credit momentum models offset mixed performance from equity cross-asset models. Lastly, the Value Pillar—a strategy that buys stocks trading below their estimated worth—saw weakness across both standard and alternative methods of identifying cheap stocks.

Looking at the return contributions by sector and rating helps to identify the main drivers of positive and negative performance. In terms of sectors, Healthcare and Leisure detracted the most for the period, due to weak selection in both categories as well as being underweight (reduced exposure) in Healthcare. On the other hand, Telecommunications and Energy were top contributors to active Fund returns, owing to positive selection effects in both sectors as well as positive allocation in Telecommunications. With respect to credit ratings, aggregate holdings in the CCC & below category notably detracted from returns are both selection and allocation struggled. The single-B and BB category holding were additive, benefitting from positive selection effects.

Future outlook

Looking ahead to the second half of 2025, we expect ongoing geopolitical dynamics to continue to shape the market environment and factor landscape. In the US, tariffs could make inflation stickier (where inflation remains high and doesn't easily decrease) and impact expected interest rates, in turn impacting the US dollar. As we do not invest based on top-down views and instead focus on specific, stock selection, we strive to remain agnostic to the overall market environment by focusing on continuous research into new diversifying signals and risk management techniques. Our goal, as always, is to build balanced, well-diversified portfolios that can navigate market inflections and volatility. With this in mind, we will not rest on our laurels but instead remain focused on improving our process to best manage the risks, known and unknown, that lie ahead.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Investment Managers' reports (continued)

Man Global Investment Grade Opportunities - Semi-Annual Report Commentary

Market summary

It was an eventful twelve months which started off with a growing consensus that the world's major economies had turned the corner in tackling inflation. But in the second half of the period under review, attention shifted to the impact of policies adopted by the new US administration, most notably the "Liberation Day" announcement of US reciprocal tariffs that severely impacted markets. The impact of these policies let to positive developments in Europe, such as the German parliament's boost to defence and infrastructure spending, this ultimately resulted in the European equity market outperforming the US in the first half of 2025.

Performance review

Against this backdrop, the Fund returned 5.35% over the period, overperforming compared to the benchmark which returned 2.33%.

The main contributors by country and industry included:

Columbia – Consumer, Non-cyclical: +0.23%

Mexico – Real Estate: +0.21%

United States
– Consumer, Cyclical: +0.17%

• Finland- Real Estate: +0.17%

United Kingdom – Financials: +0.15%

Future outlook

Risk premiums, the extra interest rates investors demand to hold riskier corporate bonds compared to safer government bonds, are now back to their pre-Liberation Day levels, with corporate bonds seemingly not pricing in any risks of slowing growth and earnings. After temporarily widening post-Liberation Day, investment grade bond risk premiums currently sit at very low historical levels. Meanwhile the US high yield risk premium – typically a warning sign for recession risk – is also at very low historical levels. Our strategies aim to avoid directional bets, but it is hard to ignore the impact that uncertainty can have on company investment and earnings over the coming months and quarters. As we look at each new data release, we are starting to see some early signs that growth may indeed be slowing. It may not be a full-blown recession, but there are enough challenges to warrant a more balanced approach to risk taking, while still seeking to generate attractive income.

It is our view that the current market backdrop calls for selective, fundamentals-driven investing, with slowing growth likely to increase performance differences between companies and distressed opportunities, thereby creating additional opportunities for active managers.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Certain indices/measures mentioned on this page have been provided for information purposes only. Investment Managers' reports (continued)

Man China Equity - Semi-Annual Report Commentary

Market Summary¹

MSCI China 40/10 index delivered strong returns of 17.30% during the first half of 2025, although the period was marked by heightened levels of volatility as markets digested in the implications of President Trump's policymaking. Q1 of 2025 was the best quarter of performance for the index since the post-pandemic reopening, and the best quarter of outperformance versus the US S&P 500 index since 2007. This was led by the emergence of DeepSeek – a low-cost Chinese AI model that could deliver equivalent results to ChatGPT – and the renewed commitment from policymakers to boost consumption and support private enterprises.

The second quarter was defined by the initial disruption of Liberation Day, and the subsequent relief of trade tensions as US reciprocal tariffs were temporarily walked-back. Index returns were more muted as Beijing's firmer stance to Trump's reciprocal tariffs weighed on share prices before a trade deal with the US was agreed in May. Adding to this pressure was evidence of renewed weakness within the property market, undermining signs of stabilisation witnessed earlier in the year.

Performance Review

The Fund generated a positive net return of 18.90%² over the period 1 January 2025 to 30 June 2025, outperforming the benchmark which returned 17.30%³.

Positive excess returns were predominately driven by stock selection, led by strong contributions from non-bank financials and healthcare companies. This was partially offset by holdings in in consumer discretionary and staples sectors.

The key contributors to returns at a stock-level included:

- Innovent Biologics (healthcare)
- New China Life Insurance (financials)
- Zhong An Online P&C Insurance (financials)

The key detractors from returns at a stock-level included:

- Alibaba (consumer discretionary)
- East Money Information (financials)
- Fuyao Glass (consumer discretionary)

Future Outlook

Looking ahead, we continue to await further details on the prospect of reform in China as the economy begins to transition to a model where growth is driven less by investment and more by consumption. After some encouraging signs during the first quarter, progress towards this goal has appeared to have slowed, likely in light of ongoing trade tensions with the US. While China's "anti-involution" policy, efforts to reduce excessive competition and overproduction in industries, is encouraging from a market confidence perspective, we remain broadly sceptical that production-focused measures alone can drive the necessary economic rebalancing without consumer spending reforms. We believe this policy change is coming however and stress the importance of being positioned correctly ahead of this shift.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Investment Managers' reports (continued)

Man Dynamic Income - Semi-Annual Report Commentary

Market summary

While 2025 began strong for investors with President Trump's return to the White House and his 'America First' agenda boosting US equities, this gave way to trade war fears and concerns about the AI theme after Chinese AI firm, DeepSeek, introduced a cheaper model, casting doubts on the US tech sector's ability to meet high expectations. Equity markets sold off at the start of the second quarter following President Trump's Liberation Day trade tariffs, but a temporary suspension of most tariffs helped stabilise markets. Conditions continued to improve as the US and China reached a temporary trade truce sent markets higher.

Performance review

Against this backdrop, Man Dynamic Income returned 4.81%¹ over the period.

The main contributors by country and sector included2:

United States – Consumer, Cyclical: 0.27%

Germany – Consumer, Non-cyclical: 0.25%

Columbia - Consumer, Non-cyclical: 0.22%

United States – Consumer, Cyclical: 0.22%

Hungary – Banks: 0.19%

Future outlook

Risk premiums, the extra interest rates investors demand to hold riskier corporate bonds compared to safer government bonds, are now back to their pre-Liberation Day levels, with corporate bonds seemingly not pricing in any risks of slowing growth and earnings. After temporarily widening post-Liberation Day, investment grade bond risk premiums currently sit at very low historical levels. Meanwhile the US high yield risk premium – typically a warning sign for recession risk – is also at very low historical levels. Our strategies aim to avoid directional bets, but it is hard to ignore the impact that uncertainty can have on company investment and earnings over the coming months and quarters. As we look at each new data release, we are starting to see some early signs that growth may indeed be slowing. It may not be a full-blown recession, but there are enough challenges to warrant a more balanced approach to risk taking, while still seeking to generate attractive income.

It is our view that the current market backdrop calls for selective, fundamentals-driven investing, with slowing growth likely to increase performance differences between companies and distressed opportunities, thereby creating additional opportunities for active managers.

Investment Managers' reports (continued)

Man Asia Credit Opportunities - Semi-Annual Report Commentary

Market Summary¹

The global fixed income (bond) market experienced significant volatility during the period, driven by US tariff headlines and heightened geopolitical tensions. Despite this, Asian credit markets demonstrated resilience, delivering strong returns. The JP Morgan Asia Credit Index (JACI), which tracks US dollar-denominated corporate bonds issued by Asian companies, posted a gain of 3.8%, with its investment grade and high-yield (the annual income return on a bond) components returning 3.8% and 4.1%, respectively. Positive performance was supported by rising US Treasury prices and steady risk premiums for investment grade bonds as well as income from Asian high-yield bonds.

In June, risk premiums, the extra interest rates investors demand for holding corporate bonds versus safer government bonds, narrowed further, supported by strong market conditions, and moved below pre-'Liberation Day' levels. Within investment-grade bonds, Korea, Indonesia, and India were the top-performing markets, while high-yield performance was driven by Chinese industrial companies, Macau gaming companies, and Indian bond issuers.

The new bond issuance market continued its recovery, marking the second consecutive year of improvement following the lows of 2023. New bond issuance reached 65% of 2024 levels, higher than the normal pace for the first half of 2025, although net new supply remained negative as more bonds matured than were issued.

Performance Review

The Fund delivered a positive net return of 3.45% over the period and was slightly below the 3.83% return of the benchmark.

Underperformance was primarily due to holding fewer long-term government and government-related bonds, which benefited from strong US Treasury performance during the period. The overweight to crossover/BB rated bonds, bonds on the border between investment grade and high yield, was the largest performance driver in an environment where interest rate movements delivered larger returns than credit risk premiums in the first half of 2025.

Key contributors to returns included:

- Japan Telecom
- China industrials
- Hong Kong Financials

Key detractors from returns included:

- Underweight of long duration sovereign/quasi-sovereign
- Hong Kong property

Future Outlook

Looking forward, risk premiums are on the tight end historically, but absolute bond yields are still high. The market expects one to two rate cuts by the US Fed towards the end of 2025 following weaker job market data. Nevertheless, inflation might persist given the real impact from US tariffs has yet to feed through. The market conditions in Asian bonds remain strong, with little new USD bond issuance, ample cash in local markets and low default rates. Trade tariff uncertainty remains with China, India and some other Asian countries, though by July, Japan and South Korea agreed to 15% tariffs.

The Fund maintained higher exposure to shorter-term high-yield bonds relative to the benchmark as we see the fundamentals for these bond issuers as solid while interest rate volatility is minimal.

For interest rate management, we continue to focus on medium-term bonds as the extra yield is sufficient to balance interest rate risk. We remain tactically underweight in very long-term bonds as we believe US government financing needs will keep long-term government bond yields high. We will closely monitor geopolitical issues around tariffs, Ukraine/Russia and Middle East ceasefires that could lead to a reversal

Man Euro Corporate Bond - Semi-Annual Report Commentary

Market summary

While 2025 began strong for investors with President Trump's return to the White House and his 'America First' agenda boosting US equities, this gave way to trade war fears and concerns about the AI theme after Chinese AI firm DeepSeek introduced a cheaper model, casting doubts on the US tech sector's ability to meet high expectations. Equity markets sold off at the start of the second quarter following President Trump's Liberation Day trade tariffs, but a temporary suspension of most tariffs helped stabilise markets. Conditions continued to improve as the US and China reached a temporary trade truce and a strong earnings season sent markets higher.

Performance review

Against this backdrop, Man Euro Corporate Bond returned 3.97%1 over the period, overperforming against the benchmark which returned 1.84%2.

The main contributors by country and industry included³:

• Germany - Real Estate: 0.28%

Columbia – Consumer, Non-cyclical: 0.22%

Finland – Real Estate: 0.20%
Luxembourg – Banks: 0.16%
Mexico – Real Estate: 0.28%

Future Outlook

Risk premiums, the extra interest rates investors demand to hold riskier corporate bonds compared to safer government bonds, are now back to their pre-Liberation Day levels, with corporate bonds seemingly not pricing in any risks of slowing growth and earnings. After temporarily widening post-Liberation Day, investment grade bond risk premiums currently sit at very low historical levels. Meanwhile the US high yield risk premium – typically a warning sign for recession risk – is also at very low historical levels. Our strategies aim to avoid directional bets, but it is hard to ignore the impact that uncertainty can have on company investment and earnings over the coming months and quarters. As we look at each new data release, we are starting to see some early signs that growth may indeed be slowing. It may not be a full-blown recession, but there are enough challenges to warrant a more balanced approach to risk taking, while still seeking to generate attractive income.

It is our view that the current market backdrop calls for selective, fundamentals-driven investing, with slowing growth likely to increase performance differences between companies and distressed opportunities, thereby creating additional opportunities for active managers.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Certain indices/measures mentioned on this page have been provided for information purposes only. Investment Managers' reports (continued)

Man Global Climate Transition Impact Bond - Semi-Annual Report Commentary

Market Review

Despite extreme policy uncertainty in the first half of the year, the US economy and consumers showed remarkable resilience. Corporates delivered robust pre-'Liberation Day' earnings growth, accompanied by stronger-than-expected guidance, despite an implied tariff rate exceeding 20%. In June, moderate inflation data and dovish commentary (language suggesting the Federal Reserve (Fed) may cut interest rates) drove US interest rates lower, risk premiums (The extra interest rate investors demand for taking on additional risk compared to safer investments) tighter, and stocks higher, with the equity market reaching all-time highs. While this rally may be encouraging, it could concern investors who believe that US rates have much further to fall and the yield curve (the difference between short-term and long-term interest rates) has significant room to steepen.

In Europe, geopolitics remain the primary driver of market dynamics. German Bunds (government bonds) sold off following Germany's fiscal plans, NATO spending pledges faced scepticism, and Middle East tensions eased. Falling inflation, subdued economic activity, and an appreciating euro simplify the European Central Bank's (ECB) decision-making process. While we expect the ECB to continue cutting interest rates in 2025, indications suggest we may be approaching the end of this cycle.

Meanwhile, in Japan, the Bank of Japan (BoJ) has paused its tightening cycle and adopted a wait-and-see approach. Although it has refrained from further hikes, we expect the BoJ to remain vigilant throughout the period, closely monitoring slower growth, moderating inflation, an appreciating yen, and potential tariff impacts. These factors reduce the urgency for higher interest rates, but the BoJ remains prepared to adjust policy should conditions warrant.

Performance Review

Against this backdrop, the Fund returned 1.30%1 for the period, underperforming the benchmark which returned 1.40%2.

The key contributors to returns included:

- Integrated Utilities
- Underweight long duration Core European sovereign bonds
- Peripheral European Financials

The key detractors from returns included:

- Off-shore Wind
- LatAm Industrial High Yield bonds

Future outlook

The Fund employs integrated assessment models focusing on climate change to aid capital allocation. This framework is complemented by fundamental credit and fixed-income analysis, guiding our investment decisions.

As of the end of June 2025, the Fund's allocation was approximately:

- 53% to Low Carbon Energy
- 36% to Electrification
- 5% to Industrial
- 4% to Transportation
- 2% to Agriculture and Land Use

Looking ahead to the second half of 2025, we see clearer supportive factors for high-quality corporate bonds, even as the broader economic outlook remains uncertain. Three key drivers stand out: bond yields remain high, new bond issuance is limited, and corporate earnings continue to exceed expectations. The US Federal Reserve's economic projections and press conference largely met expectations, incorporating tariff impacts, while Chair Powell maintained a cautious, wait-and-see approach. Powell expects US inflation to accelerate over the summer, leading to differing forecasts and a split in the Fed's interest rate projections. This highlights the delicate balancing act of monetary policy as inflation remains the central challenge for the Fed, outweighing concerns over weaker growth.

In July, several key events will shape market sentiment, including the US trade deal deadline, court rulings on various Trump-era policies, and Japan's general election. Investors will also pay close attention to inflation and employment data as they evaluate their investment strategies and outlooks.

¹ Performance data is shown net of fees with income reinvested, as at 30 June 2025, and does not take into account sales and redemption charges where such costs are applicable. Investment Managers' reports (continued)

Man Emerging Markets Corporate Credit Opportunities - Semi-Annual Report Commentary

Market Summary¹

Emerging market ('EM') corporate bonds delivered solid performance in the first half of 2025, with the JP Morgan Corporate Emerging Markets Bond Index (CEMBI)², which tracks the performance of US dollar-denominated corporate bonds issued by companies in emerging market countries, returning 4.0% despite significant tariff-induced volatility. high yield (HY) and investment grade (IG) segments performed similarly across the six months, with quarterly HY performance delivering 2.3% and 1.6% in Q1 and Q2 respectively, while IG returned 2.5% and 1.5%. Sector performance rotated notably between quarters, with real estate leading in Q1 but lagging in Q2, while infrastructure, metals and mining, and Technology, Media, and Telecommunications sector (TMT) emerged as winners following 'Liberation Day'. Regionally, Europe was the standout performer, particularly in Q2 with a 2.3% return led by Czech Republic.

The new bond issuance market, where companies first sell bonds to investors, showed resilience in Q2 with \$48bn issued in June, bringing total H1 corporate bond issuance to \$413bn (up 27% year-over-year), although net supply remained negative at approximately \$100bn. CEMBI bond yields increased relative to safer bonds during the April volatility but subsequently recovered, though they continue to trade above developed market levels as uncertainty around final tariff rates persists.

Performance Review

Against this backdrop, the Fund had a positive return over the period³. As most of our investors may know, the main driving force behind returns is idiosyncratic risk, driven by high conviction positioning and in-depth fundamental research.

The key contributors to returns included:

- China real estate
- India industrial
- Mexico financial services

The key detractors from returns included:

- Colombia energy
- UAE energy
- Ivory Coast government bonds

Future outlook

EM corporates continue to present interesting opportunities, with bond yields looking more attractive on a relative basis compared to developed markets; and despite the recent pickup in supply, the technicals remain supportive, particularly in the high yield space. However, given the uptick in volatility and remaining uncertainty, we believe this remains more of a trading-based environment which we think suits our investment approach.

Over the medium term, we take a more cautious view on the markets given the uncertainty that has been created by both tariff policy and the instability in both US rates and USD. In this environment, we believe that global growth rates will come down and we could even see recessions in certain markets, which will have a negative knock-on impact particularly in more cyclical areas of EM where we will remain cautious.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Certain indices/measures mentioned on this page have been provided for information purposes only. Investment Managers' reports (continued)

Man Global Resources Equity - Semi-Annual Report Commentary

Man Global Resource Equity (the 'Fund') launched on 14th of April 2025.

Market summary

Indices measuring the global natural resources sector climbed over the first half of the year. Despite Trump's tariff threats, weaking economic data, and the disruption triggered by China's DeepSeek challenge to AI incumbents at the start of the year, the natural resources sector performed well, in stark contrast with the broader equity markets. This strength continued into the second quarter, which saw a sharp sell-off on tariff escalation in April, followed by a sharp recovery after the Trump administration announced a temporary suspension of most tariffs. Markets continued to stabilize as signs of trade negotiations and tariff escalation deferral from US and China eased volatility. June saw a spike in geopolitical volatility due to the Israel-Iran conflict. Israel's strikes into Iran were quickly followed by US strikes at Iranian nuclear facilities, resulting in oil prices spiking during the month. However, the situation stayed contained with both sides signaling a reluctance to escalate.

Performance review

From its inception through to 30th of June 2025, the Fund had positive performance. The Fund's performance was largely attributable to its overweight exposure to metals and mining and renewables/power grid names.

At the stock level, the top contributors were Siemens Energy, First Quantum Minerals, and Hudbay Minerals. Siemens Energy posted another strong quarter and remains a key beneficiary of the global power buildout theme. Meanwhile, First Quantum rallied on the strength of copper prices for the quarter and continued strong demand from China. Lastly, Hudbay Mineral outperformed as copper prices remained strong on Chinese demand and limited supply growth.

Oil and oil equities rallied as oil prices spiked into the mid \$70 per barrel range on Iran/Israel. We think the upside case for oil remains fundamentally muted barring any meaningful supply disruptions and believe that physical balances can see some weakness in the coming period.

Detractors over this period included Bellring Brands, Huntsman Corp, and JDL Gold. BellRing Brands continued to underperform as a result of the previous quarter's weak forward guidance. Huntsman Corp also underperformed on a weak quarterly result. JDL Gold's weakness was attributable to the merger between Equinox Gold and Calibre Mining closed.

Future outlook

Global manufacturing Purchasing Manager Index (PMIs) has been stable despite tariff uncertainty. While short-term volatility will likely persist, we are steadfast in our conviction that we are in a global manufacturing trough. Going forward, we are focused on the US political process with both midterms and primaries approaching, the state of European stimulus (we believe the recent German stimulus will be a positive factor in the coming years) as well as further recovery in the Chinese domestic market.

In terms of positioning, we remain overweight in gold/silver, copper, basic chemicals and renewables/power grid. During the month, we increased our exposure to soybean crush and crop chemicals as we are increasingly bullish on this segment of the agriculture market.

Past performance is not indicative of future results. Returns may increase or decrease as a result of currency fluctuations.

Certain indices/measures mentioned on this page have been provided for information purposes only. They are intended to provide a comparative indication of particular asset classes, investment sectors, or financial markets more widely ("market backdrop"). Indices definitions

CBOE Volatility Index (VIX index)

Index measuring the market's expectation of future volatility. The VIX Index is based on options of the S&P 500® Index, considered the leading indicator of the broad U.S. stock market. The VIX Index is recognised as the world's premier gauge of U.S. equity market volatility.

For more information go to http://www.cboe.com/vix

FTSE 100 Index

The FTSE 100 is a market-capitalisation weighted index of UK-listed blue chip companies. The index is part of the FTSE UK Index Series and is designed to measure the performance of the 100 largest companies traded on the London Stock Exchange that pass screening for size and liquidity. For more information go to https://www.ftserussell.com/index-series/index-spotlights/uk-equity-indexes.

ICE BofA Index

The ICE BofA Index is a series of market-capitalisation weighted indices designed to measure the performance of various fixed-income markets. These indices are constructed by the Intercontinental Exchange (ICE) and Bank of America (BofA), spanning a wide range of bond types, including corporate, government, and municipal bonds. The indices are commonly used as benchmarks by investors and portfolio managers. For more information, go to https://www.theice.com/market-data/indices.

JP Morgan Emerging Market Bond Index Global (EMBI Global) The J.P. Morgan Emerging Markets Bond Index Global ("EMBI Global") is a traditional, market capitalisation weighted index belonging to the JPMorgan Emerging Market Bond Index (EMBI), which are a set of three bond indices to track bonds in emerging markets operated by J P Morgan. The EMBI Global tracks total returns for traded external debt instruments in the emerging markets and is an expanded version of the JPMorgan EMBI+. As with the EMBI+, the EMBI Global includes U.S dollar-denominated Brady bonds, loans, and Eurobonds with an outstanding face value of at least \$500 million. It covers more of the eligible instruments than the EMBI+ by relaxing somewhat the strict EMBI+ limits on secondary market trading liquidity. Additionally, the EMBI Global defines emerging markets countries with a combination of World Bank-defined per capita income brackets and each country's debt-restructuring history. This criteria allows the EMBI global to include a number of higher-rated countries. For more information go to www.ipmorgan.com

JP Morgan Government Bond Index Emerging Market Global Diversified (EMBI Global Diversified) The index is a comprehensive Emerging Markets debt benchmark that tracks local currency bonds issued by emerging market governments. EMBI Global Diversified is positioned as the investable benchmark that includes only those countries that are accessible by most of the international investor base. The diversification methodology limits the weights of the larger index countries by only including a specified portion of those countries' eligible current face amounts of debt outstanding, thus providing a more even distribution of weights across the countries in the index. The index belongs to the JPMorgan Emerging Market Bond Index (EMBI) family of indices for which returns and statistics are available from December 1993. For more information go to www.ipmorgan.com

MSCI All Country World Index (MSCI ACWI) The MSCI ACWI Index, MSCI's flagship global equity index, is designed to represent performance of the full opportunity set of large- and mid-cap stocks across 23 developed and 27 emerging markets. As of November 2020, it covers more than 3,000 constituents across 11 sectors and approximately 85% of the free float-adjusted market capitalisation in each market. The index is built using MSCI's Global Investable Market Index (GIMI) methodology, which is designed to take into account variations reflecting conditions across regions, market cap. Sizes, sectors, style segments and combinations. For more information go to www.msci.com

MSCI Emerging Markets Index

The MSCI Emerging Markets Index captures large and mid cap representation across 24 Emerging Markets (EM) countries*. With 1,136 constituents, the index covers approximately 85% of the free float-adjusted market capitalisation in each country. For more information go to www.msci.com

MSCI Europe Index

The MSCI Europe Index captures large and mid cap representation across 15 Developed Markets (DM) countries in Europe*. With 442 constituents, the index covers approximately 85% of the free float-adjusted market capitalisation across the European Developed Markets equity universe. For more information go to www.msci.com

MSCI Europe ex UK Index The MSCI Europe ex UK Index captures large and mid cap representation across 14 Developed Markets countries in Europe. With 345 constituents, the index covers approximately 85% of the free float-adjusted market capitalisation across European Developed Markets excluding the UK. For more information go to www.msci.com

MSCI World Index

The MSCI World Index captures large and mid cap representation across 23 Developed Markets (DM) countries*. With 1,634 constituents, the index covers approximately 85% of the free float-adjusted market capitalisation in each country. For more information go to www.msci.com

Russell/Nomura Large Cap value Index The Russell/Nomura Large Cap Index contains the top 85% value stocks of the Russell/Nomura Total Market Index in terms of float-adjusted market cap

Russell/Nomura Total Market Index The Russell /Nomura Total Market Index is a Japan Equity index consisting of the top 1,000 stocks by market cap excluding stable shareholdings covering the top 98% of all stocks listed on all Japan's stock exchanges in terms of float-adjusted market cap. For more information go to www.ftse.com

S&P 500

Index is a widely recognised gauge of the U.S. equities market. This index is an unmanaged capitalisation-weighted index consisting of 500 of the largest capitalisation U.S. common stocks. The returns of the S&P 500 include the reinvestment of dividends. For more information go to https://eu.spindices.com/

Tokyo Stock Price Index (TOPIX)

Capitalisation-weighted index of all companies listed on the First Section of the Tokyo Stock Exchange. This is a measure of the overall trend in the stock market, and is used as a benchmark for investment in Japan stocks. For more information go to https://www.ipx.co.ip/english/markets/indices/topix/

Investment Managers' reports (continued)

GLOSSARY

Active management

Active management is the use of a human element, such as a single manager, co-managers or a team of managers, to actively manage a fund's portfolio. Active managers rely on analytical research, forecasts, and their own judgement and experience in making investment decisions on what securities to buy, hold and sell. The opposite of active management is passive management, better known as "indexing".

Ancillary assets

Assets which are not the main assets of a company.

Appreciation

An increase in the market value of an asset, such as a stock, bond, commodity or piece of real estate, or in the value of one currency with respect to another. The opposite of depreciation.

Asset

Any item of economic value owned by an individual or corporation, especially that which could be converted to cash. Examples are cash, securities, accounts receivable, inventory, office equipment, real estate, a car, and other property.

On a balance sheet, assets are equal to the sum of liabilities, common stock, preferred stock, and retained earnings.

Asset class

An asset class is a group of securities that exhibits similar characteristics, behaves similarly in the marketplace and is subject to the same laws and regulations. The three main asset classes are equities, or stocks; fixed income, or bonds; and cash equivalents, or money market instruments. Some investment professionals add real estate, commodities, and increasingly, cryptocurrencies such as Bitcoin, to the asset class mix.

Balance of payments

Statement of a country's net financial transactions with other countries over a defined period of time.

Balance sheet

Financial statement that provides a snapshot of what a company owns and owes, as well as the amount invested by shareholders.

Bankers' acceptance

A bankers' acceptance (BA) is a short-term credit investment created by a non-financial firm and guaranteed by a bank to make payment. Acceptances are traded at discounts from face value in the secondary market.

Benchmark

A standard against which the performance of a fund can be measured and compared (e.g. a stock market index such as the FTSE 100 or an interest rate, such as LIBOR).

Blue Chip company

The stock of a major company with a record of strong earnings, reliable dividend payments and steady share price performance. Blue chips are normally the largest capitalised stocks in a particular market and among the most widely traded.

Bond

A debt instrument issued for a period of more than one year with the purpose of raising capital by borrowing. Generally, a bond is a promise to repay the principal along with interest (coupons) on a specified date (maturity). Some bonds do not pay interest, but all bonds require a repayment of principal. When an investor buys a bond, he/she becomes a creditor of the issuer.

Buyback

A buyback, also known as a share repurchase, is when a company buys its own outstanding shares to reduce the number of shares available on the open market. Companies buy back shares for a number of reasons, such as to increase the value of remaining shares available by reducing the supply or to prevent other shareholders from taking a controlling stake.

Cash Equivalents

Cash equivalents are investments securities that are for short-term investing, and they have high credit quality and are highly liquid. These securities have a low-risk, low-return profile and include Treasury bills, certificates of deposit, bankers' acceptances, commercial papers and other money market instruments.

Certificates of deposit (CDs)

Interest-bearing certificate issued by a bank to a depositor. Interest is paid at maturity.

Collective investment scheme

A type of investment scheme that involves collecting money from different investors and then combining all the money collected to fund the investment.

Compound interest

Earning interest on interest, or, more precisely, the interest earned on the sum of the principal amount and the interest already accumulated. A return on an investment is compounded if it takes into account compound interest, i.e. the interest is reinvested.

Investment Managers' reports (continued)

GLOSSARY (continued)

Commercial paper

A type of borrowing by companies and institutions in the form of loans where lenders do not have the right to take the assets of the borrower if they fail to repay. These loans are given for a period of a year or less.

Commodity

A good produced in bulk. Many commodities, such as coffee, meat and grain, and raw materials such as metals and oil, are traded on local, regional and/or international markets called commodity exchanges, either on a spot basis or through futures contracts, which allow the purchase or sale of a commodity at a predetermined price on a particular date in the future.

Common stock

See *Ordinary shares*

Consumer staples

Consumer staples are essential products, such as food, beverages, tobacco and household items. Consumer staples are goods that people are unable or unwilling to cut out of their budgets regardless of their financial situation (Investopedia).

Convertible bond

A bond issued by a company that has a set maturity date and pays interest in the form of a coupon. It has features of both a bond and stock and its valuation reflects both types of investments. It gives the holder the option to convert the bond into a specific number of shares of the issuing company – in other words, it has an 'embedded option'.

Corporate Bond

A bond issued by a company.

Coupon

A term used to refer to the interest paid by a bond. It derives from the fact that bonds used to be issued as bearer documents (i.e. certificates which do not identify the owner) with dated coupons attached to them. These were cut off the document when the payment of the interest was due and taken to a paying agent for the interest to be paid.

Country risk

Country risk is a term for the risks involved when someone invests in a particular country.

Country risk varies from one country to the next, and can include political risk, exchange-rate risk, economic risk, and transfer risk. In particular, country risk denotes the risk that a foreign government will default on its bonds or other financial commitments. In a broader sense, country risk is the degree to which political and economic unrest affect the securities of issuers doing business in a particular country.

Credit rating

Ratings issued by credit ratings agencies which represent the agency's evaluation of qualitative and quantitative information for a company or government. Ratings are used to rank companies and governments on the probability of them defaulting on their obligations (i.e. to repay their debts).

Credit risk

Usually used when referring to investment in bonds, credit risk is the risk of a loss deriving from the inability of the issuer of a bond to make the interest payments and repay the capital at the end of the life of the bond in full and as scheduled.

'Triple A' or 'investment grade rated' are assessed as being the lowest credit risk while non-investment grade bonds - also known as high-yield debt (or 'junk bonds') - are assessed as the highest credit risk.

The higher the credit risk, the higher the interest rate the borrower will have to attract lenders.

Currency forward

A binding contract in the foreign exchange market that locks in the exchange rate for the purchase or sale of a currency on a future date. A currency forward is essentially a hedging tool that does not involve any upfront payment.

Current account (Balance of payment current account)

Movements of money into and out of a country, relating to trade between private individuals, for example workers sending money to their families in another country. The current account includes the visible balance of trade (the net difference between exports and imports of merchandise goods) and the invisible trade balance (payments and receipts for services such as shipping, banking and tourism).

Debt security

Debt security refers to a debt instrument, such as a government bond, corporate bond, certificate of deposit (CD), municipal bond or preferred stock, that can be bought or sold between two parties and has basic terms defined, such as notional amount (amount borrowed), interest rate, and maturity and renewal date.

Deflation

Deflation is the general decline in prices for goods and services occurring when the inflation rate falls below 0%. Deflation happens naturally when the money supply of an economy is fixed. In times of deflation, the purchasing power of currency and wages are higher than they otherwise would have been.

Derivatives

Financial contracts such as futures, options and various securities that offer 'synthetic' access to an underlying asset such as a commodity, stock market or fixed income security. The price movements of a derivative generally follow the price movements of the underlying asset but derivatives generally require only small amounts of capital (margin) to gain exposure to the underlying asset.

Investment Managers' reports (continued)

GLOSSARY (continued)

Developed markets

Countries that have sound, well-established economies with a high level of economic growth and security. They are therefore thought to offer safer, more stable investment opportunities than developing markets.

Dividend

A dividend is the distribution of reward from a portion of company's earnings, and is paid to a class of its shareholders. Dividends are decided and managed by the company's board of directors, though they must be approved by the shareholders through their voting rights. Dividends can be issued as cash payments, as shares of stock, or other property, though cash dividends are the most common.

Dividend yield

See Yield (3rd definition)

Earnings per Share (EPS)

Profit, net of tax and dividends to preferred shareholders, divided by the total amount of ordinary shares outstanding. Most income statements include a calculation of earnings per share. This calculation tells you how much money shareholders would receive for each share of stock they own if the company distributed all of its net income for the period. In reality, however, companies would not distribute all of their earnings. Usually they reinvest them in the business.

Emerging markets

Emerging market is a term used to describe a developing country, in which investment would be expected to achieve higher returns but be accompanied by greater risk. Global index providers sometimes include in this category relatively wealthy countries whose economies are still considered underdeveloped from a regulatory point of view.

Equity

An ownership right representing an interest in a company.

Equity Swaps

An equity swap is an arrangement made in a futures contract whereby differences in settlement are made through cash payments, rather than by the delivery of physical goods or securities. This is generally an easier method of settlement, because both losses and gains are paid in cash. Equity swaps provide investors with the all the benefits and risks of owning a security without actually owning it.

Equity-linked security

A type of debt instrument whereby the return is linked to the performance of a group of underlying stocks or equities that are also linked to the security.

See *Earnings per share*

Exchange Traded Funds (ETFs)

Index-tracking funds that can be traded on exchanges just like a stock – so they combine the diversified holdings of a fund with the low cost and tradability of a share.

Exposure

EPS

Exposure (or market exposure) refers to the currency amount of funds, or percentage of a portfolio, invested in a particular type of security, market sector or industry, which is usually expressed as a percentage of total portfolio holdings. It represents the amount an investor can lose from the risks unique to a particular investment.

External account

See Current account

Financial Derivative instruments

See *Derivatives*

Fixed income

Term used to denote bonds and other debt instruments, because they normally pay a fixed interest rate.

Foreign exchange

Foreign exchange is the exchange of one currency for another or the conversion of one currency into another currency. Foreign exchange also refers to the global market where currencies are traded virtually around the clock.

Forward contract

A forward contract is a customised contract between two counterparties to buy or sell a specific asset on a future date at an agreed price. As opposed to stocks and bonds, a forward contract is a derivative instrument, the value of which depends on an underlying asset. Unlike standard futures contracts, forward contracts are not traded on a centralised exchange and are highly customisable.

Free Cash Flow (FCF)

The cash a company has after all outgoings, including dividends, debt payments, tax, operating costs and capital expenditure.

Fund Sector

Funds are categorised into sectors to facilitate comparisons between funds with similar investment objectives and types of investment.

Futures contract

An agreement to buy or sell a stated amount of a security, currency or commodity at a specific future date and at a pre-agreed price.

GDP

See Gross Domestic Product

Investment Managers' reports (continued)

GLOSSARY (continued)

GNP See Gross National Product

Government Bond Bonds issued by a government.

Gross Domestic Product (GDP)

The total value of an economy's domestic output of goods and services, which is one of the key indicators of

economic growth with GNP.

Gross National Product (GNP)

Same as GDP except that it adds what a country earns from overseas investments and subtracts what

foreigners earn in a country and send back home.

An index is a portfolio of stocks, chosen according to simple, pre-defined rules, and designed to capture a Index

particular investment style.

Inflation Rate at which the general level of prices for goods and services is rising and, consequently, the purchasing

power of currency is falling.

Interest rate Interest rate is the amount charged, expressed as a percentage of principal, by a lender to a borrower for the

use of assets. Interest rates are typically noted on an annual basis, known as the annual percentage rate (APR). The assets borrowed could include cash, consumer goods, and large assets such as a vehicle or

Liquidity A relative term to describe the speed at which an asset or assets can be converted into cash (liquidated) and

Liquid asset A liquid asset is an asset that can be converted into cash speedily, with little impact to the price received in

the open market. Liquid assets include money market instruments and government bonds.

Listed In relation to the shares of a company, or some funds, when those shares have been accepted for trading on

an exchange they are referred to as 'listed' investments. The exchange will have 'listing requirements', which all companies/funds must meet before they are 'accepted for listing'. The opposite of listed is over-the-

Local currency The most common form of currency used in a country. This usually encompasses the national currency of the

Long position A security that is bought in expectation that it will rise in value.

Market capitalisation Market value of a company's issued share capital - in other words, the number of shares multiplied by the

current price of those shares on the stock market. Companies are ranked as large-cap, mid-cap and smallcap depending on their market capitalisation (market cap), though the actual criteria for classification depend

on the market concerned.

Maturity date The maturity date is the date on which the principal amount of a debt instrument becomes due and is repaid

to the investor and interest payments stop.

Money market instruments

Instruments used by government and companies and others who wish to borrow money for short periods,

usually less than a year. They are also called short term debt instruments. They include certificates of deposit,

commercial paper and short term gilts.

Municipal Bond A bond issued by a state or local government (or related entities) in the US to cover capital expenditures.

Option A derivative instrument that gives the holder the right, without obligation, to buy (call) or sell (put) a security or

asset at a fixed price within a specified period or at a particular future date.

Securities (called common stock in the US) that confer ownership in a publicly listed company. Holders are Ordinary shares

entitled to the dividends declared by the company and have the right to vote on the appointment of directors

and other important matters. However they rank below holders of preferred shares.

Over the counter (OTC) Generally refers to a stock (but can also refer to other financial instruments) that is not listed on an exchange

and traded via a dealer network.

Overvalued When a share price or market is trading at levels above those justified by fundamentals.

Overweight Investment portfolio that holds an excess amount of a particular security when compared to the security's

weight in the underlying benchmark portfolio. Actively managed portfolios will make a security overweight when doing so allows the portfolio to achieve excess returns. Overweight can also refer to an investment

analyst's opinion that the security will outperform its industry, its sector or the entire market.

Investment Managers' reports (continued)

GLOSSARY (continued)

Passive management

Passive management is a style of management where a fund's portfolio mirrors a market index. Passive management is the opposite of active management. Passive management is also referred to as "passive strategy," "passive investing" or "index investing."

P/B Ratio See Price-to-Book Ratio

Preference shares Also called preferred shares. Shares that entitle the holder to a fixed-rate dividend, paid before any dividend

is distributed to holders of ordinary shares.

Preferred stock See Preference shares

Price-to-Book Ratio (P/B ratio)

The P/B ratio reflects the value that market participants attach to a company's equity relative to its book value (total assets minus total liabilities) of equity. A stock's market value is a forward-looking metric that reflects a company's future cash flows. The book value of equity is an accounting measure based on the historic cost principle, and reflects past issuances of equity, augmented by any profits or losses, and reduced by dividends and share buybacks. The higher the ratio, the higher the premium the market is willing to pay for the company above its hard assets. A low ratio may signal a good investment opportunity, but it could also mean something is fundamentally wrong with the company. The ratio is less meaningful for some types of companies, such as those in technology sectors. This is because such companies have hidden assets such as intellectual property which are of great value, but not reflected in the book value.

Primary market The market for new securities issues. In the primary market the security is purchased directly from the issuer.

Quantitative analysis

Quantitative analysis (QA) is a technique that seeks to understand behaviour by using mathematical and statistical modelling, measurement, and research. Quantitative analysts aim to represent a given reality in terms of a numerical value. Quantitative analysis is employed for several reasons, including measurement, performance evaluation or valuation of a financial instrument, and predicting real-world events, such as

changes in a country's gross domestic product (GDP).

Quantitative easing (QE)

Quantitative easing is an unconventional monetary policy in which a central bank purchases government securities or other securities from the market in order to lower interest rates and increase the money supply. Quantitative easing increases the money supply by flooding financial institutions with capital in an effort to promote increased lending and liquidity. When short-term interest rates are at or approaching zero, and when the printing of new banknotes isn't an option, quantitative easing can be considered.

Quantitative trading

A form of investing in which computers are used to sort through financial data and identify predictable patterns. Quantitative traders take advantage of modern technology, mathematics and the availability of

comprehensive databases for making rational trading decisions to identify trading opportunities.

Reference index An index used as a benchmark for performance comparison purposes but which is not a formal benchmark

as per fund's prospectus.

Return on capital The profit on an investment in relation to the amount invested which is not considered as a taxable event and

not taxed as income.

Risk-adjusted return Risk-adjusted return defines an investment's return by measuring how much risk is involved in producing that

return, which is generally expressed as a number or rating. Risk-adjusted returns are applied to individual

securities, investment funds and portfolios.

Secondary market A market in which an investor purchases a security from another investor rather than the issuer, subsequent

to the original issuance in the primary market.

Sector A sector is an area of the economy in which businesses share the same or a related product or service. It can

also be thought of as an industry or market that shares common operating characteristics. Dividing an

economy into different pieces allows for more in-depth analysis of the economy as a whole.

Share See Equity

Short position Fund managers use this technique to borrow a security and then sell it with the intention of buying it back for

less when the price falls. The position profits if the security falls in value. Within UCITS funds, derivatives -

such as equity swaps - can be used to simulate a short position.

Security A general term for stocks, bonds, options, subscription rights, warrants and other tradable investments that

confer a right to income or ownership.

Sovereign debt Sovereign debt is a central government's debt. It is debt issued by the national government in a foreign

currency in order to finance the issuing country's growth and development. The stability of the issuing government can be provided by the country's sovereign credit ratings which help investors weigh risks when

assessing sovereign debt investments.

Sovereign risk See Country Risk

Investment Managers' reports (continued)

GLOSSARY (continued)

Stock See Equity

Stock option The right to buy or sell a particular stock at a given price on or after a certain date. Stock options are often

used as an employee incentive at start-ups or large public companies.

Swap An exchange of streams of payments between two parties, typically in order to reduce interest rate or

currency risk.

Synthetic Term given to financial instruments that are created artificially by simulating other instruments with different

cash flow patterns. Synthetic products are structured to suit the cash flow needs of the investor. They are

created in the form of a contract and, therefore, given the name "synthetic".

Transferable security Any security that can be traded in the capital markets.

Treasury bill (T-bill)

A Treasury Bill (T-bill) is a short-term debt obligation backed by the Treasury Department of the U.S. government with a maturity of less than one year, sold in denominations of \$1,000 up to a maximum

purchase of \$5 million on non-competitive bids. T-Bills have various maturities and are issued at a discount from par. Investors do not receive regular interest payments but a T-Bill does include interest, reflected in the

amount it pays when it matures.

Total output The total amount of goods and services produced within an economy.

Total return Total return is the full return on an investment over a given period, including the income generated from

dividend, interest or rental payments, and any gains or losses from a change in the asset's market value. This is normally expressed as a percentage of the purchase cost, annualised if the period is less than a year.

Undervalued When a share price or market is trading at levels below those justified by fundamentals.

Underweight An underweight portfolio does not hold a sufficient amount of a particular security when compared to the

weight of that security held in the underlying benchmark portfolio. Underweight can also refer to an analyst's opinion regarding the future performance of a security in scenarios where it is expected to underperform.

Volatility The extent to which the price of a security or commodity, or the level of a market, interest rate or currency,

changes over time. High volatility implies rapid and large upward and downward movements over a relatively

short period of time; low volatility implies much smaller and less frequent changes in value.

Warrant A financial instrument, normally attached to a bond or other security, that entitles the holder to purchase a

certain amount of ordinary shares at a fixed price for a period of years or to perpetuity. The price at which the

underlying shares can be bought or sold is referred to as the exercise price or strike price.

Yield 1. The annual rate of return on an investment, expressed as a percentage.

2. For bonds and notes, the coupon rate divided by the market price. This is not an accurate measure of total

return, since it does not factor in capital gains.

3. For securities, the annual dividends divided by the purchase price. This is not an accurate measure of total

return, since it does not factor in capital gains. here, also called dividend yield or current yield.

^{*}Man GLG Sustainable Strategic Income ceased its operations on 17 May 2024.

#Man Global Climate Transition Impact Bond commenced its operations on 23 January 2024.

Condensed notes to the unaudited financial statements For the six month period ended 30 June 2025

1. General

Man Funds plc (the "Fund") was incorporated as an investment company with variable capital and with segregated liability between subfunds under the laws of Ireland as a public limited company on 1 August 1996 under registration number 252520. The Fund has been authorised by the Central Bank of Ireland (the "Central Bank") as an Undertaking for Collective Investment in Transferable Securities ("UCITS"), pursuant to the European Communities (Undertakings for Collective Investment in Transferable Securities) Regulations 2011, (as amended), (the "UCITS Regulations") and Central Bank (Supervision and Enforcement) Act 2013 (Section 48(1)) (Undertakings for Collective Investment in Transferable Securities) Regulations 2019 (the "Central Bank UCITS Regulations"). As at 30 June 2025, Man Japan CoreAlpha Equity Class I H USD is listed on the Luxembourg Stock Exchange. The Fund's investment managers are GLG Partners LP for Man GLG Portfolios, GLG LLC for GLG LLC Portfolios and Numeric Investors LLC for Man Numeric Portfolios (the "Investment Managers"). The Fund's registered office is at 70 Sir John Rogerson's Quay, Dublin 2, Ireland. The Fund has no employees.

The Fund is structured as an umbrella fund with segregated liability between sub-funds (each a "Portfolio") which means that different Portfolios may be created from time to time by the Directors with the approval of the Central Bank. Each Portfolio will be represented by a different series of Redeemable Participating Shares and will be invested in accordance with the investment objectives and policies applicable to such Portfolio. As at 30 June 2025 the Fund was comprised of nineteen Portfolios, of which eighteen were in operation:

Man GLG Portfolios

- Man Global Convertibles;
- Man Japan CoreAlpha Equity;
- Man Pan-European Equity Growth;
- Man RI Global Sustainable Future (ceased operations on 24 March 2025);
- Man Asia (ex Japan) Equity;
- Man Global Investment Grade Opportunities;
- Man China Equity;
- Man Dynamic Income;
- Man Asia Credit Opportunities;
- Man Euro Corporate Bond;
- Man Global Climate Transition Impact Bond;
- Man Emerging Markets Corporate Credit Opportunities (launched on 6 February 2025); and
- Man Global Resources Equity (launched on 15 April 2025).

Man Numeric Portfolios

- Man Systematic Emerging Markets Equity;
- Man Systematic Europe;
- Man Systematic China A Equity; and
- Man Systematic US High Yield.

GLG LLC Portfolios

- Man Global Emerging Markets Local Currency Rates and
- Man Global Emerging Markets Bond.

As at 30 June 2025 the following Portfolios were registered with the Swiss Financial Market Supervisory Authority ("FINMA"):

- Man Global Convertibles;
- Man Japan CoreAlpha Equity;
- Man Systematic Emerging Markets Equity;
- Man Global Emerging Markets Local Currency Rates;
- Man Global Emerging Markets Bond;
- Man Pan-European Equity Growth;
- Man RI Global Sustainable Future (ceased operations on 24 March 2025);
- Man Systematic Europe;
- Man Systematic China A Equity;
- Man Asia (ex Japan) Equity;
- Man Systematic US High Yield;
- Man Global Investment Grade Opportunities;
- Man China Equity;
- Man Dynamic Income;
- Man Asia Credit Opportunities;
- Man Euro Corporate Bond;
- Man Global Climate Transition Impact Bond;
- Man Emerging Markets Corporate Credit Opportunities (launched on 6 February 2025); and
- Man Global Resources Equity (launched on 15 April 2025).

All Classes of Redeemable Participating Shares are together referred to as the "Redeemable Participating Shares" or "Shares".

As at 30 June 2025, there were eighteen Portfolios in operation.

Condensed notes to the unaudited financial statements (continued) For the six month period ended 30 June 2025

1. General (continued)

The investment objectives and policies of each active Portfolio are detailed below.

Man Global Convertibles

Man Global Convertibles' investment objective is to achieve compounded appreciation of the investor's capital through investing globally in an actively managed portfolio of convertible bonds, convertible preference shares, debt securities, warrants and other equity-linked securities, which may include but are not limited to such instruments as stock options and equity swaps, with less volatility than a portfolio of the underlying equities in the international securities markets.

As at 30 June 2025, Classes D USD, D H EUR, DL USD, DL H EUR, DL H GBP, DW H EUR, I USD, I H GBP, IH EUR, IL USD, IL H EUR, IM USD, IM H EUR, IM H GBP and IU H EUR were in operation.

Man Japan CoreAlpha Equity

Man Japan CoreAlpha Equity's investment objective is to provide a high total return for a suitable long term appreciation of the investor's capital. The Portfolio invests primarily in securities of issuers in Japan or of issuers which derive a substantial part of their revenues from activities in Japan.

As at 30 June 2025, Classes D EUR, D EUR G Dist, D JPY, D USD, D H CHF, D H EUR, D H GBP, D H USD, DW C EUR, DW H EUR, DY C EUR, DY H EUR, I EUR Dist, I GBP, I JPY, I JPY Dist, I SEK, I USD, I USD Dist, I H CHF, I H EUR, I H EUR Dist, I H GBP, I H GBP Dist, I H USD, I H USD Dist, IU JPY, IXMU EUR, IXX EUR, IXX JPY, IXX H CHF, IXX H EUR, IXX H EUR Dist, IXX H GBP Dist, IXX H USD and IXX H USD Dist were in operation.

Class I H USD is listed on the Luxembourg Stock Exchange.

Man Systematic Emerging Markets Equity

Man Systematic Emerging Markets Equity's investment objective is to earn a return on investment greater than the returns available from investments in the MSCI Emerging Markets Index. The Portfolio will seek to achieve its objective by using Numeric's proprietary quantitative models to select securities for purchase or sale in order to allocate all or substantially all of its assets in accordance with the Man Numeric Emerging Markets strategy which involves taking long positions in relation to issuers primarily in emerging markets throughout the world, that represent, in the judgement of Numeric, an opportunity for short-term investment gains.

As at 30 June 2025, Classes D EUR, D USD, DW H EUR, DYU H EUR, I EUR, I GBP, I JPY, I SEK, I USD, I USD Dist, IMU USD, IX DKK, IX EUR, IX NOK, IX SEK, IX USD, IXU EUR, IXU GBP, IXU USD and IXX GBP were in operation.

Man Global Emerging Markets Local Currency Rates

Man Global Emerging Markets Local Currency Rates' investment objective is to achieve a return over the long term primarily through investment in a portfolio of emerging markets local currency bonds, foreign exchange forwards and/or other derivatives. The Portfolio primarily invests in bonds and currency forwards.

As at 30 June 2025, Classes D C EUR, D C USD, DW C EUR, DY C EUR, I C EUR, I C SEK, I C USD, I H EUR Dist and I H GBP were in operation.

Man Global Emerging Markets Bond

Man Global Emerging Markets Bond's investment objective is to achieve a return in all market conditions primarily through investment in emerging market fixed income securities directly, or indirectly via the use of derivatives. The Portfolio primarily invests in bonds.

As at 30 June 2025, Classes D C EUR, D C USD, DW H EUR, DYU H EUR, I C EUR, I C SEK, I C USD, I F USD, I H EUR, I H GBP and IF H EUR were in operation.

Man Pan-European Equity Growth

Man Pan-European Equity Growth's investment objective is to provide medium to long term capital appreciation. The Portfolio is a concentrated long-only fund which invests in European companies across all market capitalisations.

As at 30 June 2025, Classes D C EUR, D C USD, DF C EUR, DV C USD, DV H USD, DW C EUR, I C CHF, I C EUR, I C SEK, I C USD, IF C EUR, IV C USD and IXMU EUR were in operation.

Man RI Global Sustainable Future

Man RI Global Sustainable Future's investment objective is to provide long term capital appreciation and outperform its reference benchmark over the long-term. The Portfolio is a concentrated long-only fund which invests in global companies across all market capitalisations.

The Portfolio ceased operations on 24 March 2025.

Man Systematic Europe

Man Systematic Europe's investment objective is to earn a return on investment greater than the returns available from investments in the MSCI Europe Index. The Portfolio will seek to achieve its objective by using Numeric's proprietary quantitative models to select securities for purchase or sale in order to allocate all or substantially all of its assets in accordance with the Man Numeric European Core strategy. The strategy involves taking long positions in relation to issuers in the countries included in the MSCI Europe Index, and in the judgement of Numeric, represent an opportunity for short-term investment gains.

The Portfolio will be constrained to have approximately 50% less carbon intensity than the benchmark and will have overall projected carbon emissions that are aligned with the 2 degrees Celsius target (as set in the Paris Agreement of 12 December 2015). Stocks are selected using a combination of three primary model groups: 1) Climate; 2) Environmental, Social and Governance ("ESG"); and 3) Fundamental Investment Themes.

As at 30 June 2025, Classes D C EUR, I C EUR, I C GBP, I C SEK and I C USD were in operation.

Condensed notes to the unaudited financial statements (continued) For the six month period ended 30 June 2025

1. General (continued)

Man Systematic China A Equity

Man Systematic China A Equity's investment objective is to earn a return on investment greater than the returns available from investments in the MSCI China A Net Return Index USD. The Portfolio will seek to achieve its objective by using Numeric's proprietary quantitative models to select equity securities for purchase or sale in order to allocate all or substantially all of its assets in accordance with the Man Numeric China strategy. The strategy involves taking long positions in relation to issuers in China, that represent, in the judgement of Numeric, an opportunity for investment gains in respect of China A Shares.

As at 30 June 2025, Classes D C EUR, D H EUR, I USD, I C EUR, I C GBP and I C SEK were in operation.

Man Asia (ex Japan) Equity

Man Asia (ex Japan) Equity's investment objective is to provide medium to long-term capital appreciation. The Portfolio will seek to achieve its objective by allocating all or substantially all of its net proceeds of Shares in (i) transferable securities (ii) exchange-traded and OTC financial derivative instruments, (iii) money market instruments, (iv) other collective investment schemes and (v) deposits, cash or cash equivalents. At least 51% of the value of the Portfolio will be invested on an ongoing basis in holdings in equity securities that are authorised for official trading on a stock exchange or included in an organised market.

As at 30 June 2025, Classes D USD, D C EUR, DW C EUR, DY C EUR, I USD, I C CHF, I C EUR, I C GBP, IF USD Dist A, IF C EUR, IF C EUR Dist A, IF C GBP, IF C GBP, IF C GBP, IXU C GBP, IXU C GBP Dist A and IXU USD were in operation.

Man Systematic US High Yield

The Portfolio's investment objective is to earn a return on investment greater than the returns available from investments in the ICE BAML US High Yield Index. The Portfolio will seek to achieve its objective by using Numeric's proprietary quantitative models to select securities for purchase or sale in order to allocate all or substantially all of its assets in accordance with the Man Numeric U.S. High Yield strategy (the "US High Yield Strategy"). The strategy involves taking long positions primarily in US dollar denominated high yield corporate bonds listed or traded on recognised markets in the US.

As at 30 June 2025, Class I USD was in operation.

Man Global Investment Grade Opportunities

Man Global Investment Grade Opportunities' investment objective is to provide income and capital growth over the medium to long term. The Portfolio will seek to achieve its objective by allocating all or substantially all of its assets in (i) transferable securities, (ii) exchange traded and OTC financial derivative instruments, (iii) money market instruments, (iv) other collective investment schemes and (v) deposits, cash or cash equivalents.

As at 30 June 2025, Classes D USD, D USD Dist, D H CHF, D H EUR, D H SGD, DU USD, DUV H EUR, DV USD, DW USD, DW H EUR, DW U USD, DY H EUR, DYV USD, DYV USD Dist, I EUR Dist, I USD, I USD Dist, I H BRL USD, I H CHF, I H EUR, I H EUR Dist, I H GBP, I H GBP Dist, I H JPY, I H SGD, IF EUR Dist, IF USD Dist, IF H EUR, IF H GBP, IF H GBP Dist, IV USD, IXMU H EUR, IYV USD and IYV USD Dist were in operation.

Man China Equity

Man China Equity's investment objective is to provide medium to long-term capital appreciation. The Portfolio will seek to achieve its objective by allocating all or substantially all of its assets in (i) transferable securities, (ii) exchange-traded and OTC financial derivative instruments, (iii) money market instruments, (iv) other collective investment schemes and (v) deposits, cash or cash equivalents. At least 51% of the value of the Portfolio will be invested on an ongoing basis in holdings in equity securities that are authorised for official trading on a stock exchange or included in an organised market.

As at 30 June 2025, Classes I USD, I C EUR, I C GBP, IF USD and IF C EUR were in operation.

Man Dynamic Income

Man Dynamic Income's investment objective is to provide income and capital growth over a medium to long-term period by investing predominantly in bonds issued by companies and governments worldwide. The Portfolio will seek to achieve its objective by allocating all or substantially all of its assets in (i) transferable securities, (ii) exchange traded and OTC financial derivative instruments, (iii) money market instruments, (iv) other collective investment schemes and (v) deposits, cash or cash equivalents.

As at 30 June 2025, Classes D USD, D USD Dist, D H CHF, D H EUR, D H SGD, D H SGD Dist, DV USD, DW USD, DWU USD, DY H EUR, DYV USD, DYW H EUR, I USD, I USD Dist, I USD G Dist, I H CHF, I H EUR, I H GBP, I H GBP Dist, I H SGD, I H SGD Dist, IF USD, IF H CHF, IF H EUR, IF H GBP, IU USD, IX H GBP and IYV USD were in operation.

Man Asia Credit Opportunities

Man Asia Credit Opportunities' investment objective is to provide an absolute return to investors through investing in diversified portfolio of predominantly Asian securities. The Portfolio will seek to achieve its objective by allocating all or substantially all of its assets in (i) transferable securities, (ii) money market instruments, (iii) exchange traded and OTC financial derivative instruments, (iv) other collective investment schemes and (v) deposits, cash or cash equivalents.

As at 30 June 2025, Class I USD, I H EUR, IF USD, IF H EUR and IF H GBP were in operation.

Man Euro Corporate Bond

Man Euro Corporate Bond's investment objective is to provide income and capital growth over the medium and long term. The Portfolio will seek to achieve its objective by allocating all or substantially all of its assets in (i) transferable securities, (ii) exchange traded and OTC financial derivative instruments (iii) money market instruments, (iv) other collective investment schemes and (v) deposits, cash or cash equivalents.

As at 30 June 2025, Classes D EUR, DY H SEK, I EUR, I EUR Dist, I H USD and IF EUR were in operation.

Condensed notes to the unaudited financial statements (continued) For the six month period ended 30 June 2025

1. General (continued)

Man Global Climate Transition Impact Bond

Man Global Climate Transition Impact Bond's sustainable investment objective is to support the financing of climate solutions with a view to contributing to the decarbonisation of the global economy and the mitigation of and/or adaptation to the adverse impact of climate change, while providing a long-term total return to investors.

As at 30 June 2025, Class D H EUR, I USD, I H EUR, IF USD and IF H EUR were in operation.

Man Emerging Markets Corporate Credit Opportunities

Man Emerging Markets Corporate Credit Opportunities' investment objective is to provide income and capital growth over the medium to long term. The Portfolio will seek to achieve its objective by allocating all or substantially all of its assets in (i) transferable securities, (ii) exchange-traded and OTC financial derivative instruments, (iii) money market instruments, (iv) other collective investment schemes and (v) deposits, cash or cash equivalents.

As at 30 June 2025, Class D H EUR, I USD, I H EUR, IF H CHF and IF H EUR Dist were in operation.

Man Global Resources Equity

Man Global Resources Equity's investment objective is to provide long-term capital growth. The Portfolio will seek to achieve its objective by allocating all or substantially all of its assets in (i) transferable securities, (ii) exchange-traded and OTC financial derivative instruments, (iii) money market instruments, (iv) other collective investment schemes and (v) deposits, cash or cash equivalents.

As at 30 June 2025, Class D EUR, I GBP, I USD, IF EUR, IF GBP and IF USD were in operation.

2. Material accounting policies

(a) Accounting convention

The unaudited financial statements have been prepared in accordance with *International Accounting Standard 34: Interim Financial Reporting* ("IAS 34") as adopted by the European Union ("EU"). The unaudited financial statements have been prepared using the historical cost basis except for financial assets and liabilities at fair value through profit or loss that have been measured based on fair value.

The unaudited financial statements do not include all the information and disclosures required in the annual financial statements, and should be read in conjunction with the Fund's audited annual financial statements as at 31 December 2024 which have been prepared in accordance with International Financial Reporting Standards ("IFRS") as adopted by the EU. These unaudited interim financial statements have been compiled using accounting policies, methods of computation and presentation which are consistent with the audited annual financial statements for the year ended 31 December 2024, unless otherwise stated.

The preparation of unaudited financial statements in accordance with IFRS requires management to make judgements, estimates and assumptions that affect the amounts reported and disclosures made in these unaudited financial statements and accompanying notes, including certain valuation assumptions. Uncertainty about these assumptions and estimates could result in outcomes that require a material adjustment to the carrying amount of assets or liabilities in the future.

The combined fund balances are expressed in United States dollar ("US\$"), being the presentation currency of the Fund as a whole. For combined fund balances in the unaudited statement of financial position, the non-US\$ Portfolios are translated using the exchange rate at the date of the unaudited statement of financial position. For combined fund balances in the unaudited statement of comprehensive income, the non-US\$ Portfolios are translated at the average exchange rate prevailing during the period. The combined subscriptions and redemptions in the unaudited statement of changes in net assets are also translated at the average rate prevailing during the current period. The translation gain/(loss) resulting from the preparation of the combined fund balances in the unaudited financial statements amounting to US\$283,587,318 (30 June 2024: (US\$339,155,836)) has been shown in the combined fund column of the unaudited statement of comprehensive income. The gain/loss does not have any effect on the individual Portfolios.

(b) Changes in accounting policy and disclosure

New standards, interpretations and amendments adopted by the Fund:

There were no recent accounting pronouncements applicable to the Fund in the current period.

At the date of authorisation of the unaudited financial statements there were a number of other standards and interpretations which were in issue but not yet effective. Management anticipates that the adoption of these standards and interpretations in future periods will have no material impact on the unaudited financial statements of the Fund.

3. Cash and cash equivalents, bank overdraft, collateral balances with brokers, collateral balances due to brokers and due from/to brokers

At the period end, amounts disclosed as cash and cash equivalents, bank overdraft, collateral balances with brokers and collateral balances due to brokers were held at The Bank of New York Mellon (London Branch), BNP Paribas, Citibank N.A., Goldman Sachs International, HSBC Bank Plc, JP Morgan Securities Plc, Morgan Stanley & Co. International Plc, Nomura Holdings and Societe Generale. Collateral balances with brokers represent the margin account balances held with the broker and collateral balances due to broker represents an amount payable to broker as a result of margin or collateral amount payable at the period end. These include amounts transferred as collateral (which is subject to a security interest) against open derivatives, short positions or financial instruments purchased on margin, deposits held at call with banks and other short term highly liquid investments with original maturities of three months or less.

Condensed notes to the unaudited financial statements (continued) For the six month period ended 30 June 2025

3. Cash and cash equivalents, bank overdraft, collateral balances with brokers, collateral balances due to brokers and due from/to brokers (continued)

Included in cash and cash equivalents balances at 30 June 2025 are US T-bills with a fair value of US\$Nil (cost: US\$Nil) (31 December 2024: US\$199,394,778 (cost: US\$199,389,434)) for Man Global Investment Grade Opportunities and US\$596,996 (cost: US\$597,006) (31 December 2024: US\$697,587 (cost: US\$693,641)) for Man Asia Credit Opportunities.

Due from brokers and to brokers represent receivables for financial instruments sold and payables for financial instruments purchased that have been contracted for but not yet settled or delivered on the statement of financial position date respectively.

The portion of balance with/due to brokers represented by collateral as at 30 June 2025 and 31 December 2024 is outlined below:

	30 June 2025	31 December 2024
Man Global Convertibles	US\$208,910	US\$1,460,523

Man Global Resources Equity	US\$270,582	n/a

4. Financial assets and liabilities at fair value through profit or loss

Fair value of financial instruments

The Fund classifies fair value measurements using a fair value hierarchy that reflects the significance of the inputs used in determining the measurements in line with IFRS 13, Fair Value Measurement.

The fair value hierarchy has the following levels:

- Level 1 Quoted market price in an active market for an identical instrument.
- Level 2 Valuation techniques based on observable inputs. This category includes instruments valued using: quoted market prices in active markets for similar instruments; quoted prices for similar instruments in markets that are considered less than active; or other valuation techniques where all significant inputs are directly or indirectly observable from market data.
- Level 3 Valuation techniques using significant unobservable inputs. This category includes all instruments where the
 valuation technique includes inputs not based on observable data and the unobservable inputs could have a significant impact
 on the instrument's valuation. This category includes instruments that are valued based on quoted prices for similar
 instruments where significant unobservable adjustments or assumptions are required to reflect differences between the
 instruments.

Valuation techniques

Listed or publicly traded investment in equity and debt securities, government bonds, managed funds and derivatives

When fair values of listed securities and debt securities at the reporting date, as well as publicly traded derivatives, are based on quoted market prices or binding dealer price quotations, without any deduction for transaction costs, the instruments are included within Level 1 of the hierarchy.

Unlisted debt securities and treasury bills

The Fund invests in debt securities, corporate and government bonds and treasury securities. In the absence of a quoted price in an active market, they are valued using observable inputs such as recently executed transaction prices in securities of the issuer or comparable issuers and yield curves. Adjustments are made to the valuations when necessary to recognise differences in the instruments terms. To the extent that the significant inputs are observable, the Fund categorises these investments as Level 2.

Unlisted asset-backed securities

The fair values of investments in asset-backed securities, for which there is currently no active market, are calculated using a valuation model which is accepted in the industry. The most frequently applied valuation techniques include forward pricing and swap models, using present value calculations. The models incorporate various inputs including both credit and debit valuation adjustments for counterparty and own credit risk, foreign exchange spot and forward rates and interest rate curves. For these financial instruments, significant inputs into models are market observable and are included within Level 2.

Condensed notes to the unaudited financial statements (continued) For the six month period ended 30 June 2025

4. Financial assets and liabilities at fair value through profit or loss (continued)

Fair value of financial instruments (continued)

Valuation techniques (continued)

Over-the-counter derivatives

The Fund uses widely recognised valuation models for determining fair values of over-the-counter derivatives. The most frequently applied valuation techniques include forward pricing and swap models, using present value calculations. The models incorporate various inputs including both credit and debit valuation adjustments for counterparty and own credit risk, foreign exchange spot and forward rates and interest rate curves. For these financial instruments, significant inputs used are market observable and are included within Level 2.

For all other financial instruments, fair value is determined using valuation techniques. Valuation techniques include net present value techniques, comparison to similar instruments for which market observable prices exist, options pricing models and other relevant valuation models.

The following tables summarise the financial instruments at fair value through profit or loss as at 30 June 2025 and 31 December 2024 and the financial instruments measured at fair value in the statement of financial position grouped into the fair value hierarchy:

Man Global Convertibles 30 June 2025	Level 1	Level 2	Level 3	Total Fair Value
	US\$	US\$	US\$	US\$
Financial assets at fair value through profit or loss				
Held for Trading:				
Equities and managed funds				
Equities	899			899
Total equities and managed funds	899			899
Interest bearing securities

Man Emerging Markets Corporate Credit Opportunities and Man Global Resources Equity commenced their operations on 6 February 2025 and 15 April 2025, respectively. Hence, there were no investments as at 31 December 2024.

Short term balances are excluded from the tables as their carrying value at the period end approximates their fair value.

Investments are reviewed at each financial reporting point to ensure that they are correctly classified between Level 1, 2 and 3 in accordance with the fair value hierarchy outlined above. Where an investment's characteristics changed during the period and investments no longer meet the criteria of a given level, they are transferred into a more appropriate level at the end of the relevant financial reporting period.

For the period/year ended 30 June 2025 and 31 December 2024, there were no transfers between Level 1 and Level 2.

All net realised and unrealised gains/(losses) in the tables above are reflected in the accompanying statement of comprehensive income. The net amount of (US\$7,126) (31 December 2024: US\$123,511) for Man Global Convertibles, €Nil (31 December 2024 €6,129) for Man Systematic Europe, US\$Nil (31 December 2024: (US\$514,800)) for Man Global Investment Grade Opportunities and (US\$ 60,706) (31 December 2024: (US\$113,100)) for Man Dynamic Income relates to those financial instruments held by the Fund at 30 June 2025 and 31 December 2024 and is reflected in net gain/(loss) on financial assets and liabilities at fair value through profit or loss in the statement of comprehensive income.

The fair value of investments classified within Level 3 is based on unobservable inputs that may be subject to significant variability. Because of the inherent uncertainty of valuation with respect to such investments, the Fund's estimates of fair value may differ significantly from fair values that would have been used had observable inputs been available for the valuation of such investments, and the differences could be material.

The tables below disclose the valuation techniques used in the valuation of Level 3 investments and quantifies the effect of significant unobservable inputs used to value investments that fall in this category. The ranges of these fair value are not representative of the appropriate inputs to use when calculating the fair value of any one Level 3 asset or liability. Accordingly, the ranges of fair value presented below do not represent uncertainty in, or possible ranges of fair value measurements of the Fund's Level 3 assets/liabilities.

The fair value impact of the discount range disclosed above is the Investment Manager's assessment of the range of possible illiquidity discounts.

Forward currency contracts

As part of its portfolio management techniques, the Fund may use forward currency contracts to economically hedge any non-functional currency exposure (although formal hedge accounting is not used). Forward currency contracts may also be used for trading purposes. Forward contracts entered into by the Fund represent a firm commitment to buy or sell an underlying asset, or currency at a specified value and point in time based upon an agreed or contracted quantity.

Forward currency contracts may expose the Fund to the risks associated with the absence of an exchange market on which to close out an open position. The investment managers closely monitor the Fund's exposure under forward currency contracts as part of the overall management of the Fund's market risk.

Derivative financial instruments

The Fund may trade derivative financial instruments, including futures, forward currency contracts, ASCOTs, credit default swaps, equity swaps, interest rate swaps and total return swaps whose values are based upon an underlying asset, index, currency or interest rate.

The Fund is subject to both market and credit risk in trading derivative financial instruments. Market risk is the potential for changes in value due to changes in market interest rates, foreign exchange rates, indices and changes in the value of the underlying financial instruments. Credit risk is the possibility that a loss may occur if a counterparty fails to perform according to the terms of the contract. Substantially all derivative contracts are transacted on a margin basis. Such transactions may expose the Fund to significant off-balance sheet risk in the event margin deposits and collateral investments are not sufficient to cover losses incurred.

The Investment Managers manage the risk associated with these transactions by maintaining margin deposits and collateral investments with its brokers in compliance with individual exchange regulations and internal guidelines. The Investment Managers also take an active role in managing and controlling the Fund's market and counterparty risks and monitoring trading activities and margin levels daily and, as necessary, deposits additional collateral or reduces positions.

Credit default swaps are contracts in which the Fund pays or receives an interest flow in return for the counterparty accepting or selling all or part of the risk of default or failure to pay of a reference entity on which the swap is written. Where the Fund has bought protection, the maximum potential loss is the value of the interest flows the Fund is contracted to pay until maturity of the contract. Where the Fund has sold protection, the maximum potential loss is the nominal value of the protection sold. As at 30 June 2025, the maximum potential payout under credit default swaps where the Portfolio has sold protection is US\$10,593,080 (31 December 2024: US\$828,400) for Man Global Investment Grade Opportunities, US\$14,555,740 (31 December 2024: US\$Nil) for Man Dynamic Income and €4,390,102 (31 December 2024: €Nil) for Man Euro Corporate Bond.

The fair value of these contracts as at 30 June 2025 was of US\$1,256,049 (31 December 2024: US\$ 51,778) for Man Global Investment Grade Opportunities, US\$14,940 (31 December 2024: US\$Nil) for Man Dynamic Income and €152,600 (31 December 2024: €Nil) for Man Euro Corporate Bond.

The Fund may purchase or write put and call options through OTC markets. Options purchased by the Fund provide the Fund with the opportunity to purchase (call options) or sell (put options) the underlying asset at an agreed-upon value either on or before the expiration of the option. Options written by the Fund provide the purchaser of the option the opportunity to purchase from or sell to the Fund the underlying asset at an agreed-upon value either on or before the expiration of the option. Premiums received from writing options are marked-to-market in accordance with note 2 and the resulting gains or losses are recorded in the statement of comprehensive income. The Fund may also invest in swaptions which are a combination of features of an option and an interest rate swap. The maximum loss to a buyer of an option is the loss of the premium. The writer of a call option has to bear the risk of an unfavourable change in the value underlying the option and, unless an offsetting long position is owned, the theoretical loss is unlimited.

Derivative financial instruments are generally based on notional amounts which are not recorded in the unaudited financial statements. These notional amounts represent the theoretical principal value on which the cash flows of the derivative transactions are based. Unrealised gains or losses, rather than notional amounts, or the exchange-traded derivatives traded by the Fund are included in the statement of financial position. The net unrealised gains or losses, rather than contract or notional amounts, represent the Fund's approximate future cash flows from trading activities.

Condensed notes to the unaudited financial statements (continued) For the six month period ended 30 June 2025

4. Financial assets and liabilities at fair value through profit or loss (continued)

Derivative financial instruments (continued)

At 30 June 2025 and 31 December 2024, the Fund's exposure through its investments in derivative financial instruments to underlying positions in notional amounts are summarised as follows:

Condensed notes to the unaudited financial statements (continued) For the six month period ended 30 June 2025

8. Related party transactions

Neither the Directors, nor their families, nor the secretary (Matsack Trust Limited), nor the Investment Managers had any interests in the Shares of the Fund during the period ended 30 June 2025, with the exception of 29,998 Subscriber Shares held by Man Asset Management (Ireland) Limited.

During the period Samantha McConnell, Ronan Daly and Bronwyn Wright earned Directors' fees of €17,500 each. John Morton has elected to waive his Directors' fee as he is the CEO and a director of Man Asset Management (Ireland) Limited, the Manager of the Fund.

Each of the Directors is or may become involved in other financial investment and professional activities which may cause conflicts of interest with the management of the Fund. These activities include management or administration of other companies (including those with investment objectives similar to those of the Fund or structures that may be related to Man Group plc sponsored investment funds), serving as directors, advisers and/or agents of other companies, including companies and legal structures in which the Fund may invest and/or which may invest into the Fund.

GLG Partners LP, GLG LLC and Numeric Investors LLC - the Investment Managers of the Portfolios, Man Asset Management (Ireland) Limited - the Manager of the Fund and Man Investments AG - the Distributor in relation to the Portfolios of the Fund are indirect whollyowned subsidiaries of Man Group plc and all subsidiaries of Man Group plc are related parties.

The following transactions took place between the Fund and its related parties:

		Total fees	Fees payable
Related party	Types of fees	/(income)	/(receivable)
30 June 2025	/income	US\$	US\$
Man Asset Management (Ireland) Limited	Management fees	35,556,752	8,602,249
Man Asset Management (Ireland) Limited	Performance fees	1,222,035	495,140
Man Asset Management (Ireland) Limited	Administration fees*	16,380,237	11,810,777
Man Asset Management (Ireland) Limited	Expense reimbursement	(7,688,192)	(4,592,295)

Man Asset Management (Ireland) Limited	Expense reimbursement	(11,367,594)	(3,053,730)
Directors	Directors' fees	80,726	-

^{*} The amount paid to each Administrator and Investment Manager is determined between the parties from time to time, but, for the avoidance of doubt, the Investment Manager receives only the portion of the administration fee relating to the administrative support services it provides pursuant to the Administrative Services Agreement. Part of the administration fee will be paid by the Fund to the Manager (for on-payment to the Administrator) monthly in arrears and the remainder will be paid by the Fund to the Investment Manager.

Administration fees and expense reimbursement are included in accrued expenses and other liabilities and other assets, respectively in the unaudited statement of financial position.

The above amounts are payable on demand and do not bear interest.

The Directors are satisfied that there are arrangements in place to ensure that transactions carried out with connected parties of the Portfolio are carried out as if negotiated at arm's length and any such transactions are in the best interests of the shareholders of the Portfolio. The Directors are satisfied that any transactions entered into with connected parties during the period complied with the aforementioned obligation.

All transactions with the connected parties were entered into the ordinary course of business and on normal commercial terms.

Condensed notes to the unaudited financial statements (continued) For the six month period ended 30 June 2025

11. Soft commissions

In line with the introduction of revised rules in respect of the use of dealing commission as part of the implementation of the Directive 2014/65/EU on Markets in Financial Instruments and amending Directive 2004/39/EC ("MiFID II"), effective from 3 January 2018, the Investment Manager no longer pays for its investment research via dealing commission. The Investment Manager has established a research budget and the Portfolios have accrued a fee to pay for the research services independent of trade execution. The Investment Manager will share the research costs with the Portfolios based on an allocated usage basis. All transactions are placed and executed on the basis that best execution is achieved.

The Fund incurred transaction costs including equity swaps commissions which are included in the net gain/(loss) on financial assets and liabilities at fair value through profit or loss in the unaudited statement of comprehensive income.

Condensed notes to the unaudited financial statements (continued) For the six month period ended 30 June 2025

12. Transaction costs

For the period ended 30 June 2025 and 30 June 2024, the Fund incurred transaction costs, included in the unaudited statement of comprehensive income as part of net gain/(loss) on financial assets and liabilities at fair value through profit or loss, as follows:

	30 June 2025	30 June 2024
Man Global Convertibles	US\$317	US\$582

^{*}Man RI Global Sustainable Future, Man GLG Strategic Bond and Man GLG Sustainable Strategic Income ceased their operations on 24 March 2025, 23 December 2024 and 17 May 2024, respectively.

13. Securities Financing Transactions Regulation

The Securities Financing Transactions Regulation, as published by the European Securities and Markets Authority, aims to improve the transparency of the financial markets. Disclosures regarding exposures to Securities Financing Transactions ("SFTs") will be required on all reports and accounts published.

As at 30 June 2025, certain Portfolios engaged in securities financing transactions, refer to the reporting requirement in respect of the Securities Financing Transactions Regulation section for details.

14. Significant events during the period

Prospectus

A new Supplement for the GLG Partners LP Portfolios was issued on 3 March 2025 to the Prospectus dated 11 November 2024. The amendments to the Prospectus reflected the removal of China from the Business Day definition for Man Asia (ex Japan) Equity and Man China Equity.

A new Supplement for the GLG Partners LP Portfolios was issued on 11 March 2025 to the Prospectus dated 11 November 2024. The amendments to the Prospectus reflected a change with respect to Man Global Climate Transition Impact Bond to reflect that the coal exclusion which is applied in respect of the Portfolio does not apply in respect of investments in green, transition, or sustainable bonds.

A new Supplement for the GLG LLC Portfolios was issued on 18 March 2025 to the Prospectus dated 11 November 2024. The amendments to the Prospectus reflected the approval of a new sub-fund, Man Global Resources Equity, which commenced its operations on 15 April 2025.

A new Supplement for the Man Numeric Portfolios was issued on 20 May 2025 to the Prospectus dated 11 November 2024. The amendments to the Prospectus reflected the name change for Man Systematic Europe and reflected an additional share class "IX", and its fee structure for Man Systematic Emerging Markets Equity.

Fund closures

Man RI Global Sustainable Future ceased its operations on 24 March 2025.

Fund launches

Man Emerging Markets Corporate Credit Opportunities and Man Global Resources Equity commenced their operations on 6 February 2025 and 15 April 2025, respectively.

Condensed notes to the unaudited financial statements (continued) For the six month period ended 30 June 2025

Man Global Resources Equity	IF USD	14 April 2025

The Directors, Investment Managers and the Manager acknowledge the current crisis in Ukraine and all applicable Russian related sanctions. The Investment Manager has reviewed positions held across the strategy for any Russian and Ukrainian exposure. Appropriate action was taken by the relevant Investment Manager to reduce or remove certain direct exposures to Russia where necessary and the situation is under ongoing review.

The ongoing political instability in the region is an additional risk factor which is being monitored and could impact the valuation of the Fund's assets after the period end.

At the start of 2025, the US government introduced a 10% minimum tariff on most imported goods, along with higher reciprocal tariffs on a broad range of countries. This led to significant uncertainty regarding the economic outlook, as market participants scrambled to assess the potential impacts on both growth and inflation. Consequently, equity markets experienced a severe correction however, markets quickly recovered as the administration softened their approach, announcing a 90-day pause on reciprocal tariffs to countries who had not yet adopted retaliatory tariffs, causing equity indices to rally following their monthly lows. The Manager will continue to monitor the situation closely.

Furthermore, there were no other significant events during the period ended 30 June 2025.

Condensed notes to the unaudited financial statements (continued) For the six month period ended 30 June 2025

15. Subsequent events since the period end

A new Supplement for the GLG Partners LP Portfolios was issued on 15 August 2025 to the Prospectus dated 11 November 2024. The amendments to the Prospectus reflected the approval of a new sub-fund, Man Global Credit Value, which at the date of approval of these financial statements has not yet launched.

A new Supplement for the GLG Partners LP Portfolios was issued on 19 August 2025 to the Prospectus dated 11 November 2024. The amendments to the Prospectus reflected changes with respect to Man Global Climate Transition Impact Bond in regard to the minimum amounts to be invested in green bonds and sustainable investments that are Taxonomy alighted along with the removal of the maximum amounts to be invested in sustainable bonds.

There have been no additional subsequent events since the period end that impact the Fund and require disclosure in the unaudited financial statements.

16. Stock lending

The Fund may enter into stock lending programmes organised by generally recognised International Central Securities Depositaries Systems provided that the programme is subject to a guarantee from the system operator. As at 30 June 2025 and 31 December 2024, the Fund has a stock lending programme in place with Bank of New York Mellon (London Branch).

As at 30 June 2025, no sub-fund is engaged in securities lending.

17. Dividends

On 30 June 2025 and 31 December 2024, the Directors proposed the payment of dividends as per the table below:

Classifications:
(a) Exchange traded derivative instruments.

(b) OTC financial derivatives instruments.

All other investments held at the period end are transferable securities listed on an official stock exchange.

Analysis of Total Assets		% of Total Assets
Transferable securities listed on	official stock exchange	74.89
OTC financial derivative instrum	ents described in classification (b) above	1.10
Transferable Securities as descri	ribed in # above	19.13
Transferable securities dealt on	another regulated market described in * above	2.14
Other current assets		2.74
		100.00

Analysis of Total Assets rather than Net Assets is required under UCITS Notice 8.2 appendix B.

[#]Transferable securities other than those listed on an official stock exchange or dealt on another regulated market.

Classifications:					

(a) Exchange traded derivative instruments

(b) OTC financial derivatives instruments.

All other investments held at the period end are transferable securities listed on an official stock exchange.

Analysis of Total Assets	% of Total Assets
Transferable securities listed on official stock exchange	75.23
OTC financial derivative instruments described in classification (b) above	0.76
Transferable Securities as described in # above	1.70
Transferable securities dealt on another regulated market described in * above	14.18
Other current assets	8.13
	100.00

Analysis of Total Assets rather than Net Assets is required under UCITS Notice 8.2 appendix B.

Positions valued at zero have been priced in accordance with the valuation policy.

 $^{^{\}star}$ Transferable securities dealt on another regulated market.

[#]Transferable securities other than those listed on an official stock exchange or dealt on another regulated market.

The Statement of Significant Purchases and Sales reflects the aggregate purchases of a security exceeding one percent of the total value of purchases and aggregate disposals greater than one percent of total value of the sales for the year. At minimum the largest 20 purchases and 20 sales must be given or all purchases and sales if less than 20.

Appendix I (Unaudited)
For the six month period ended 30 June 2025

Common Reporting Standard - Data Protection Information Notice

The Fund hereby provides the following data protection information notice to all Shareholders in the Fund either as of 31 December 2015 or at any point of time since this date.

For the avoidance of doubt, this notice applies equally to any Shareholders that have ceased to hold Shares in the Fund since 1 January 2016. Furthermore, it should be noted that this notice is applicable to Controlling Persons of certain Shareholders. The Fund hereby confirms that they intend to take such steps as may be required to satisfy any obligations imposed by (i) the OECD's Standards for Automatic Exchange of Financial Account Information in Tax Matters ("the Standard"), which therein contains Common Reporting Standards ("CRS"), as applied in Ireland by means of the relevant international legal framework and Irish tax legislation and (ii) EU Council Directive 2014/107/EU, amending Directive 2011/16/EU as regards mandatory automatic exchange of information in the field of taxation ("DAC2"), as applied in Ireland by the means of the relevant tax legislation, so as to ensure compliance or deemed compliance (as the case may be) with the Standard/CRS and the DAC2 from 1 January 2016. In this regard, the Investment Manager on behalf of the Fund is obliged under Section 891F and Section 891G of the Irish Taxes Consolidation Act, 1997 (as amended) and regulations made pursuant to those sections to collect certain information about each Shareholder's tax arrangements (and also collect information in relation to relevant Controlling Persons of Specific Shareholders).

In certain circumstances, the Investment Manager on behalf of the Fund may be legally obliged to share this information and other financial information with respect to a Shareholder's interests in the Fund with the Irish Revenue Commissioners (and, in particular situations, also share information in relation to relevant Controlling Persons of specific Shareholders). In turn, and to the extent the account has been identified as a Reportable Account, the Irish Revenue Commissioners will exchange this information with the country of residence of the Reportable Person(s) in respect of the Reportable Account.

In particular, information that may be reported in respect of a Shareholder (and relevant Controlling Persons, if applicable) includes name, address, date of birth, place of birth, account number, account balance or value at period end (or, if the account was closed during such period, the balance or value at the date of the closure of the account), any payments (including redemption and dividend/interest payments) made with respect to the account during the calendar year, tax residency(ies) and tax identification number(s).

Supplementary information (Unaudited)
For the six month period ended 30 June 2025

Report of Directors' Remuneration (Unaudited)

The Directors of the Fund who are also employees of Man Group plc and companies within its group structure ("Man Group") do not receive any remuneration in respect of their services as directors of the Fund. The other directors receive fixed remuneration in respect of their services which is set at a level determined by the Board of Directors as a whole and which is not performance related. This is detailed in note 8 of these unaudited financial statements. None of the Directors are currently in receipt of variable remuneration in respect of their services as directors of the Fund and none of the Directors are currently in receipt of a pension from the Fund. The Fund has appointed Man Asset Management (Ireland) Limited as its UCITS management company. As such, the provisions of Article 14b of Directive 2009/65/EC in relation to remuneration are not applicable to the Fund. However, they do apply to Man Asset Management (Ireland) Limited, which has adopted a remuneration policy to ensure compliance.

Unaudited reporting requirement in respect of the Securities Financing Transactions Regulation For the six month period ended 30 June 2025

Portfolio swaps

The Investment Managers may, on behalf of each sub-fund and subject to the conditions and within the limits laid down by the Financial Conduct Authority and the Prospectus, employ techniques and instruments relating to transferable securities, including investments in OTC Financial Derivative Instruments ("FDI") provided that such techniques and instruments are used for efficient portfolio management purposes or to provide protection against exchange risk or for direct investment purposes, where applicable.

The Fund did not engage in securities lending activity during the period, however it invested in equity swaps and total return swaps.

Securities Lending

All securities lending transactions entered into by the sub-funds are subject to a written legal agreement between the sub-funds and Bank of New York Mellon (London Branch) (the "Lending Agent"), and separately between the Lending Agent and the approved borrowing counterparty. Collateral received in exchange for securities lent is delivered to an account in the name of the Depositary on behalf of the sub-funds. Collateral received is segregated from the assets belonging to the sub-funds' Depositary or the Lending Agent.

The total income earned from securities lending transactions is split between the relevant sub-fund and the securities lending agent. The sub-fund receives at least 80% while the securities lending agent receives up to 20% of such income with all operational costs borne out of the securities lending agent's share. For the period ended 30 June 2025, the Fund did not engage in securities lending activity and therefore did not receive any income from securities lending transactions.

All of the non-cash collateral received by the Fund was held by the Lending Agent, on a tri party settlement basis as at 30 June 2025.

100% of cash collateral is maintained in a segregated account with the custodian. 100% of non-cash collateral is maintained in pooled accounts.

Portfolio Swaps

OTC derivative transactions are entered into by the Fund under an International Swaps and Derivatives Associations, Inc. Master Agreement ("ISDA Master Agreement") or similar agreement. An ISDA Master Agreement is a bilateral agreement between the Fund and a counterparty that governs OTC derivative transactions (including total return swaps and portfolio swaps) entered into by the parties. All OTC derivative transactions entered under an ISDA Master agreement are netted together for collateral purposes therefore any collateral disclosures provided below/elsewhere in the report are in respect of all OTC derivative transactions entered into by the Fund under the ISDA Master agreement, not just portfolio swaps.

The collateral figures provided on the next page relate to collateral held to support specific SFTRs, other cash held at brokers to support SFTRs, and other derivative transactions held at brokers where SFTRs are transacted.

The following table details the value of portfolio swaps as a proportion of the Fund's NAV, as at 30 June 2025:

	% of Net Assets
Man Global Convertibles	0.63%
Man Systematic Emerging Markets Equity	1.78%
Man Asia (ex Japan) Equity	0.17%
Man Global Investment Grade Opportunities	0.12%
Man China Equity	0.07%
Man Dynamic Income	0.08%
Man Euro Corporate Bond	0.01%
Man Global Resources Equity	0.62%

All returns and costs from securities borrowing from OTC transactions were accrued by the Fund and were not subject to any returns sharing arrangements with the Fund's Investment Managers or any other third parties.

Unaudited reporting requirement in respect of the Securities Financing Transactions Regulation (continued) For the six month period ended 30 June 2025

Portfolio Swaps (continued)

The following table details the value of portfolio swaps, analysed by counterparty as at 30 June 2025:

Counterparty Man Global Convertibles BNP Paribas	Counterparty's country of establishment United Kingdom	Portfolio Swap Market value US\$ 658,710
Man Systematic Emerging Markets Equity Goldman Sachs International Morgan Stanley & Co. International plc	United Kingdom United Kingdom	US\$ 970,614 22,727,288
