Investment risks

For complete information on risks, refer to the legal documents. The value of investments and any income will fluctuate (this may partly be the result of exchange rate fluctuations) and investors may not get back the full amount invested. The fund uses derivatives (complex instruments) for investment purposes, which may result in the fund being significantly leveraged and may result in large fluctuations in the value of the fund. As this fund is invested in a particular sector, you should be prepared to accept greater fluctuations in the value of the fund than for a fund with a broader investment mandate. Investment in instruments providing exposure to commodities is generally considered to be high risk which may result in large fluctuations in the value of the fund. Investments in small and medium sized companies involve greater risks than those customarily associated with larger companies.

Fund Strategy

The fund is an actively managed portfolio that typically invests in stocks of mining companies which provide diversified exposure to gold and other precious metals. The investment team selects stocks based on bottom-up fundamental analysis at the individual company level. Its strategy can be considered contrarian. The strategy takes a long-term view on commodity prices and focuses on companies with quality management teams and quality assets. This results in an emphasis on valuation and risk/reward profiles.

Past performance does not predict future returns. The performance period shown here starts on the last day of the first indicated month and ends on the last day of the last indicated month.
