Objective and Investment Policy

The objective of this Sub-Fund is to track the performance of MSCI Europe Index (the "Index"), and to minimize the tracking error between the net asset value of the Sub-Fund and the performance of the Index.

The Sub-Fund aims to achieve a level of tracking error of the Sub-Fund and its index that will not normally exceed 1%.

Risk Indicator (Source : Fund Admin)

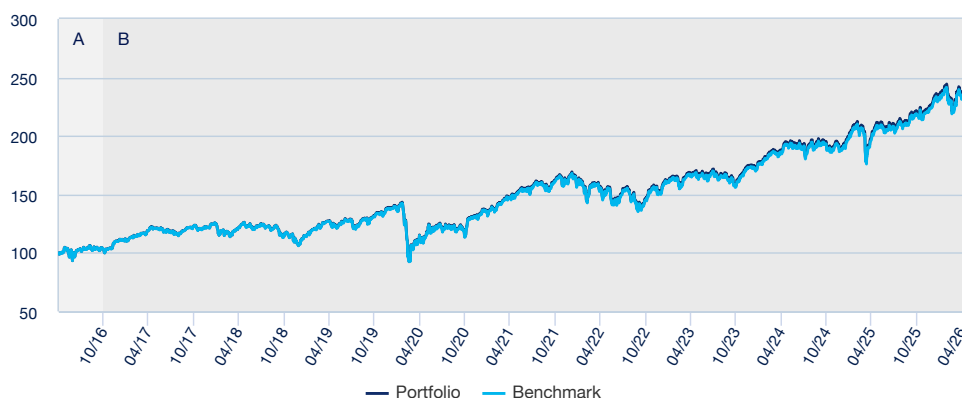

Lower Risk

Higher Risk

The SRI represents the risk and return profile as presented in the Key Information Document (KID). The lowest category does not imply that there is no risk. The SRI is not guaranteed and may change over time. The risk indicator assumes you keep the product for 5 years. The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movement in the markets or because we are not able to pay you.

* Source : Amundi. The above cover complete periods of 12 months for each calendar year. Past performance is no predictor of current and future results and does not guarantee future yield. Any losses or gains do not take into consideration any costs, commissions and fees incurred by the investor in the issue and buyout of the shares (e.g. taxes, brokerage fees or other commissions deducted by the financial intermediary). If performance is calculated in a currency other than the euro, any losses or gains generated can thereby be affected by exchange rate fluctuations (both upward and downward). The discrepancy accounts for the performance difference between the portfolio and the index.

Management commentary

The ongoing blockade of the Strait of Hormuz is beginning to weigh on the global economy, causing a resurgence of inflation without, at this stage, altering the growth trajectory. In the United States, investment continues to support activity, while prospects are deteriorating for consumers. Europe remains more exposed to the energy shock, while Asian countries are trying to mitigate its impact. Central banks have chosen to wait, but markets are anticipating a reversal and new hikes in key interest rates. Equity markets have been supported by the AI theme and strong first-quarter results from American companies. The dollar has slightly depreciated, without, however, supporting gold, which continues its decline. Oil remains highly volatile and is trading around \$100 per barrel.

Equity markets rebounded strongly in April with a 9 to 10% increase in global indices and volatility decreased (VIX<17%) after the announcement of the ceasefire in Iran and the end of proceedings against J. Powell. Europe, weakened by the blockade of the Strait of Hormuz and a new major energy shock, clearly underperformed (Eurostoxx50 +5.6%) with a rise in the euro. Several European companies reported disappointing results. Hermès shares fell by 10% after announcing a drop in sales, as consumers cut back on spending in the context of the Middle East conflict. The DAX30 (+7.1%) clearly outperformed the CAC40 (+3.8%).
