FUND OVERVIEW

- The Fund aims to maximise the return on your investment through a combination of capital growth and income on the Fund's assets.
- The Fund seeks to gain at least 70% of its investment exposure to companies domiciled in, or exercising the main part of their business in, emerging markets. This is achieved by investing at least 70% of its total assets in equity securities (e.g. shares) and equity-related (E-R) securities and when determined appropriate, fixed income (FI) securities (such as bonds), money market instruments (MMIs) (i.e. debt securities with short-term maturities), deposits and cash. The E-R securities include financial derivative instruments (FDIs) (i.e. investments the prices of which are based on one or more underlying assets). FDIs may be used to help achieve the Fund's investment objective and the Fund may, via FDIs, generate market leverage (i.e. where the Fund gains market exposure in excess of the value of its assets). A significant portion of the Fund's assets may be invested in total return swaps and contracts for difference that aim to achieve a specified return based on underlying assets such as equity and FI securities.
- The FI securities and MMIs may be issued by governments, government agencies, companies and supranationals (e.g. the International Bank for Reconstruction and Development) and may be investment grade (i.e. meet a specified level of credit worthiness), non-investment grade or unrated at the time of purchase.

RISK INDICATOR

CAPITAL AT RISK: The value of investments and the income from them can fall as well as rise and are not guaranteed. Investors may not get back the amount originally invested.

KEY RISKS:

- Credit risk, changes to interest rates and/or issuer defaults will have a significant impact on the performance of fixed income securities. Potential or actual credit rating downgrades may increase the level of risk.
- Emerging markets are generally more sensitive to economic and political conditions than developed markets. Other factors include greater 'Liquidity Risk', restrictions on investment or transfer of assets, failed/delayed delivery of securities or payments to the Fund and sustainability-related risks.
- The value of equities and equity-related securities can be affected by daily stock market movements. Other influential factors include political, economic news, company earnings and significant corporate events.
- Derivatives may be highly sensitive to changes in the value of the asset on which they are based and can increase the size of losses and gains, resulting in greater fluctuations in the value of the Fund. The impact to the Fund can be greater where derivatives are used in an extensive or complex way.
- Counterparty Risk: The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Fund to financial loss.
- Credit Risk: The issuer of a financial asset held within the Fund may not pay income or repay capital to the Fund when due.
- Liquidity Risk: Lower liquidity means there are insufficient buyers or sellers to allow the Fund to sell or buy investments readily.
