Vontobel Fund - TwentyFour Strategic Income Fund HN (hedged), EUR

Morningstar Rating as of 31.05.2026 ★★★★★

Marketing document for retail investors in: AT, CH, DE, ES, LU, NL

Investment objective

This actively managed bond fund aims to achieve an attractive level of income along with the opportunity for capital growth.

Key features

While respecting risk diversification, the fund invests worldwide across credit ratings, including high yield, predominantly in bonds and similar interest-bearing securities, such as ABS, MBS, AT1, RT1, Tier 2, or CoCo bonds, of sovereign and corporate issuers. Specific limits apply for ABS, MBS, and CoCo bonds. Issuers of the latter shall mainly be European or UK banks and insurers. In adverse markets, the fund may be invested in full in money-market instruments. It considers specific sustainability criteria in assessing potential investments, combining the promotion of environmental and/or social characteristics with a commitment to sustainable investments. It uses no benchmark. The investment team has full discretion.

Approach

The investment team identifies relative-value opportunities based on rigorous economic, technical, and credit analyses. It flexibly adjusts the portfolio, striving to benefit from both rising and falling interest rates.

Summary Risk Indicator (SRI)

The SRI is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you.

The risk indicator assumes you keep the product for 5 years.

Sector breakdown (%)**Risks**

Investing in the Sub-Fund implies the following risks which are described in detail in the section "Risks" of the Sales Prospectus. The table below explains which risks are specifically related to the Sub-Fund and could affect an investment in the Sub-Fund.

Investment Fund Risks	Investment Management Risks	Other Risks
– Performance Risk – Market Risk – Operational Risk – Liquidity Risk	– Fixed Income Risk – Credit Risk – Interest Rate Risk – High Yield Investment Risk – Contingent Convertible Bond Risk – Financial Derivative Instruments Risks – Leverage Risk – Emerging Markets Risk – Currency Risk – Currency Trading Risk – ESG Strategy Risk	– Sustainability Risk

Any of these risks could cause a Sub-Fund to lose money, to perform less well than similar investments, to experience high volatility of the Share price, or to fail to meet its investment objective over any period of time. It cannot be guaranteed that the investor will recover the capital invested.

Glossary

Average Maturity indicates the length of time until the initial investment amount of a bond is due to be repaid. "Average maturity" is calculated on a bond portfolio by weighting each bond's residual maturity by its relative size. **Average Rating**, or credit rating, assesses a bond issuer's ability to repay on time all its debt (interest and principal). High ratings, like AAA or Aaa, indicate low risk (i.e., low probability of default), while ratings such as BBB- or Baa3 indicate a higher risk. **Collateralised debt obligation (CDO)** is a structured finance product backed by a pool of debt assets, such as mortgage-backed securities (MBS), asset-backed securities (ABS), collateralized bond obligations (CBOs) and collateralized loan obligations (CLOs). Typically these structures pool cash flows from the underlying assets and then pay investors based on their seniority, so that investors in more senior tranches of the CDO receive their payments first, while investors in the most junior tranches suffer any losses first. **Collateralised loan obligation (CLO)** is a type of CDO which involves pools of corporate loans, refinanced in a securitized structure. **Credit default swap (CDS)** is a derivative financial instruments which allows an investor to offset default risks. Similar to an insurance contract, if an investor buys a CDS on a security, the investor is reimbursed by the counterparty if the security defaults within a certain period. **Credit-spread duration**, or credit duration, or spread duration, is a measure of the sensitivity of the price of a bond to a change in credit spreads. **Current yield** is the %-return on a bond investment, calculated as the

interest payments expected from the bonds if held for one year, divided by the current prices of the bonds. **Current yield, estimated in another currency** is the currency-hedged current yield. The current yield is estimated by calculating the expected cost of hedging into the respective currency over 12 months. Current yield is the %-return on a bond investment, calculated as the annualized expected return based on the interest payments, current market price and the current expected redemption/maturity date and redemption/maturity price. The currency-hedged current yield is estimated by calculating the expected cost of hedging into the respective currency over 12 months. **Distribution policy** of a fund defines the dividend distribution for its share classes to investors. Accumulating share classes reinvest the income received from the fund holdings back into the fund and do not distribute to shareholders. Distributing shares typically make cash payments to shareholders on a periodic basis. **ISIN** (International Securities Identification Number) is a unique code that identifies a specific financial security. It is assigned by a country's respective national numbering agency (NNA). **Management fee** is a fee which covers the costs charged to a fund relating to portfolio management services and, if applicable, to distribution services. **Modified duration** is an adjusted version of Macaulay Duration and measures the percentage change in a bond price as a result of a change in yield. It is used to measure the sensitivity of a bonds cash flows to a change in interest rates and is more commonly used than Macaulay Duration. **Net Asset Value (NAV) / share** also known as the share price of a fund, represents the value per share of the fund. It is calculated by dividing the fund's assets less its liabilities by the number of shares outstanding. For most funds it is calculated and reported daily. **Ongoing charges** expresses the sum of the costs of running a fund on an ongoing basis, like the management fee and various legal and operating costs. It is calculated retroactively over a period of 12 months as a percentage of the fund assets. If the available data is insufficient, for example, for newly launched funds, ongoing charges may be estimated using data from funds with similar characteristics. **Share class** is a compartment of a fund with a distinct client type, distribution policy, fee structure, currency, minimum investment, or other characteristics. The characteristics of each share class are described in the fund prospectus. **SRI** (Summary Risk Indicator) is a guide to the level of risk of this fund compared to other products. For details on the SRI, please refer to the KID. The risks relevant for the fund are detailed in its sales prospectus. **Swing Pricing eligible** is an industry standard mechanism to protect long term investors in a fund against trading costs occurring when investors enter or exit the fund. This is achieved by adjusting the NAV upwards or downwards respectively so that the additional trading costs caused by subscriptions or redemptions are borne by investors trading in the fund. Full details of the Swing Pricing mechanism are given in the fund prospectus. **VALOR** is an identification number issued by SIX Financial Information and assigned to financial instruments in Switzerland. **Volatility** measures the fluctuation of a fund's performance over a certain period. It is most commonly expressed using the annualized standard deviation. The higher the volatility, the riskier a fund tends to be. **WKN** (or Wertpapierkennnummer) is an identification code of securities registered in Germany, issued by its Institute for Issuance and Administration of Securities.
