INVESTMENT STRATEGY

Utilizing a proprietary quantitative approach ODDO BHF US Equity Trend invests in US equities. The quantitative model rates equities based on a smart momentum strategy analysing extensive historical data with the aim to detect stable trends in the market. The portfolio construction process involves a strong focus on diversification and risk management by applying various optimization constraints.

*The glossary of indicators used is available for download on www.am.oddo-bhf.com in the Information section. | Sources : ODDO BHF AM SAS, Bloomberg, Morningstar® Sustainability provides company-level analysis used in the calculation of Morningstar's Sustainability Score.

(1) The summary risk indicator (SRI) is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the market or because we are not able to pay you. It ranges from 1 (low risk) to 7 (high risk). This indicator is not constant and will change according to the fund's risk profile. The lowest category does not mean risk-free. Historical data, such as that used to calculate the SRI, may not be a reliable indication of the fund's future risk profile. There is no guarantee that the investment objectives in terms of risk will be achieved.

(2) Information on the EU Sustainable Finance Disclosure Regulation (SFDR) can be found in the SFDR classification(2) section of the document.

SUSTAINABLE REPORT – METHODOLOGY

ODDO BHF AM considers that measuring the environmental, social and governance impact of an investment is an essential step in disseminating good practices in ESG integration. To do this, it is imperative to have reliable, simple quantitative criteria (no reprocessing) and to allow comparison between portfolios regardless of their composition (large vs midcaps, geographical and sectoral diversity).

The choice of indicators is therefore crucial for the relevance of impact measurement. The data for the environmental indicators come from our external non-financial analysis provider, MSCI. We systematically indicate the availability of the data at the level of the portfolio and its benchmark.

Carbon metrics methodology: We updated our methodology of carbon intensity calculation.

Starting January 31st, 2023, when reported carbon values are unavailable or inconsistent, estimated carbon values are used.

The estimations are based on average carbon value (scope 1+2 emissions) of sectoral peers as a function of revenues

MONTHLY MANAGEMENT COMMENT

The S&P 500 posted a marginal decline of -1.2% in June on a total return basis, masking significant intra-month volatility. The month was defined by a sharp rotation within the technology complex: the Nasdaq 100 fell more than 7% from its record at one point mid-month, driven by a positioning-driven unwind in crowded AI and semiconductor trades. A recovery followed in the back half of the month, supported by progress on a US-Iran peace deal, resilient jobs data, and the Supreme Court's unwinding of Trump-era tariffs – which analysts flagged as a potential earnings tailwind. Despite the monthly dip, the S&P 500 closed out its best quarter since 2020, with more than \$8 trillion added to market value over the three-month period.

Best performers were defensive and rate-sensitive sectors. Health Care led with +7.4%, followed by Utilities (+6.5%) and Industrials (+6.4%) – the latter recovering sharply as Middle East peace prospects eased energy cost concerns and lifted sentiment toward defense and aerospace names.

Worst performers were growth and commodity-linked sectors. Communications (-6.6%) and Energy (-5.6%) lagged materially, with Energy pressured by falling oil prices following the US-Iran interim peace deal. Technology (-3.7%) suffered from the AI positioning unwind, with record outflows of \$9.3 billion from tech funds in the week through June 24, though chipmakers recovered strongly into month-end.

The ODDO BHF US Equity Trend Fund outperformed its benchmark in June, with outperformance being driven overwhelmingly by stock selection. The Technology Hardware & Equipment and Semiconductors sectors were the primary sources of selection alpha, anchored by Western Digital's AI storage re-rating and KLA Corp's participation in the broader semiconductor equipment rally fueled by data center investment and Korean chipmaker capacity announcements. An overweight to Capital Goods, a sector that significantly outpaced the benchmark, added meaningful allocation value. On the detracting side, Cboe Global Markets bore the brunt of regulatory disruption in the exchange space, while Gilead's mixed clinical news flow kept its shares under pressure despite several positive pipeline and regulatory developments. Applied Materials, though a strong absolute performer, lagged its sector peers on a relative basis. The period's results reflect a portfolio well-positioned in AI-adjacent hardware and equipment themes, partially offset by idiosyncratic headwinds in financial services and biopharma.

RISKS:

The fund is exposed to the following risks :risk of capital loss, equity risk, interest rate risk, credit risk, risk associated with discretionary management, currency risk, risk associated with commitments on forward financial instruments, counterparty risk, liquidity risk of underlying assets, emerging markets risk, volatility risk, risk associated with currency conversion, Sustainability risk, quantitative model risk

SFDR CLASSIFICATION²

The EU Sustainable Finance Disclosure Regulation (SFDR) is a set of EU rules which aim to make the sustainability profile of funds transparent, more comparable and better understood by end investors. Article 6: The management team does not consider sustainability risks or adverse effects of investment decisions on sustainability factors in the investment decision making process. Article 8: The management team addresses sustainability risks by integrating ESG criteria (Environment and/or Social and/or Governance) into its investment decision making process. Article 9: The management team follows a strict sustainable investment objective that significantly contributes to the challenges of the ecological transition, and addresses Sustainability Risks through ratings provided by the Management Company's external ESG data provider.
