INVESTMENT STRATEGY

Since 2005, ODDO BHF Polaris Moderate has offered a global and broadly diversified, moderate multi-asset investment solution. It is characterized by an equity allocation between 0% and 40% and a bond segment that invests mainly in investment grade bonds. The portfolio invests in securities listed or traded on regulated markets, mainly in Europe, the US or Emerging Markets. It can also invest up to 10% in gold by certificates or similar.

The investment objective is to avoid major setbacks due to price fluctuations and to generate an additional return to a bond investment, while taking into account environmental, social issues and corporate governance (ESG) criteria.

(1) The summary risk indicator (SRI) is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the market or because we are not able to pay you. It ranges from 1 (low risk) to 7 (high risk). This indicator is not constant and will change according to the fund's risk profile. The lowest category does not mean risk-free. Historical data, such as that used to calculate the SRI, may not be a reliable indication of the fund's future risk profile. There is no guarantee that the investment objectives in terms of risk will be achieved.

ASSET ALLOCATION

MONTHLY MANAGEMENT COMMENT

The stock markets ended the year on a positive note. Expectations of further interest rate cuts by the US Federal Reserve to boost the economy and hopes for a continuation of the AI trend, supported by solid corporate earnings, had a positive effect. Investor demand is increasingly spreading across a broader spectrum of stocks and is no longer limited to a few large technology companies. In Europe, investors' hopes for 2026 rested on stimulus measures, particularly from the German government, and an accompanying economic upturn. In view of growing global debt, yields on long-term government bonds rose. In the equity portfolio, we divested our modest holdings in SiteOne and cosmetics company e.l.f. Beauty following disappointing performance. After good performance, we realised gains through partial sales of our positions in Amphenol and TotalEnergies. New additions include semiconductor equipment manufacturer ASML and British industrial holding company Halma. We further expanded our position in French electronics group Schneider Electric. The duration of the bond portfolio remained unchanged at around 4.3. We increased our position in Pluxee bonds, which offer a significant premium over other issuers with comparable credit ratings. We also increased our existing position in SES subordinated bonds, but reduced our senior bonds, which appear less attractive following a downgrade. We sold a bond issued by luxury goods manufacturer Kering after it performed well.

SUSTAINABLE REPORT – METHODOLOGY

ODDO BHF AM considers that measuring the environmental, social and governance impact of an investment is an essential step in disseminating good practices in ESG integration. To do this, it is imperative to have reliable, simple quantitative criteria (no reprocessing) and to allow comparison between portfolios regardless of their composition (large vs midcaps, geographical and sectoral diversity).

The choice of indicators is therefore crucial for the relevance of impact measurement. The data for the environmental indicators come from our external non-financial analysis provider, MSCI. We systematically indicate the availability of the data at the level of the portfolio and its benchmark.

ESG integration at ODDO BHF Asset Management | 3 systematic steps

Exclusions

- **Norm-based:** exclusion of companies that do not comply with certain international standards.(chemical weapons , anti-personnel mines, violation of the principles of the Global Compact, etc.)
- **Sector-based:** total or partial exclusion of sectors or activities based on ethical considerations (tobacco, gambling, weapon, adult entertainment / pornographie and Coal...)

The Yield to Maturity (YTM) is the estimation at a certain date of the expected rate of return of a bond portfolio if the securities are held to maturity. It does by no means constitute a promised return. It can, therefore, be affected by interest rate risks, default risks, reinvestment risks and the fact that bonds may not be held until maturity.

The Yield to worst (YTW) is the estimation at a certain date of the worst expected rate of return of a bond portfolio of which some of the securities would not be held until maturity but redeemed at the discretion of the issuer (call). It does by no means constitute a promised return. It can, therefore, be affected by interest rate risks, default risks, reinvestment risks and the fact that bonds may not be held until maturity.
