Objective and Investment Policy

The objective of this Sub-Fund is to track the performance of MSCI Europe Index (the "Index"), and to minimize the tracking error between the net asset value of the Sub-Fund and the performance of the Index.

The Sub-Fund aims to achieve a level of tracking error of the Sub-Fund and its index that will not normally exceed 1%.

Risk Indicator (Source : Fund Admin)

Lower Risk

Higher Risk

The SRI represents the risk and return profile as presented in the Key Information Document (KID). The lowest category does not imply that there is no risk. The SRI is not guaranteed and may change over time. The risk indicator assumes you keep the product for 5 years. The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movement in the markets or because we are not able to pay you.

* Source : Amundi. The above cover complete periods of 12 months for each calendar year. Past performance is no predictor of current and future results and does not guarantee future yield. Any losses or gains do not take into consideration any costs, commissions and fees incurred by the investor in the issue and buyout of the shares (e.g. taxes, brokerage fees or other commissions deducted by the financial intermediary). If performance is calculated in a currency other than the euro, any losses or gains generated can thereby be affected by exchange rate fluctuations (both upward and downward). The discrepancy accounts for the performance difference between the portfolio and the index.

Management commentary

Global economic activity remains generally resilient despite mixed signals and the blockage of the Strait of Hormuz. In the United States, growth is holding up, but the labor market is weakening and inflation remains high, prompting the Fed to act cautiously. In the eurozone, rising oil prices are reigniting inflation, while activity remains hesitant, leading the ECB to remain alert to a possible tightening of monetary policy. In the United Kingdom, growth and employment are holding up, with stabilized inflation and a Bank of England on pause. Markets have been highly volatile following the surge in oil prices, with rising interest rates, falling equities, a stronger dollar, and a decline in gold.

The energy shock, rising rates, and geopolitical uncertainty have led to a consolidation of equity markets and an increase in volatility (VIX>30%). The monthly performance does not fully reflect the downward pressure as Donald Trump's reassuring message of an imminent end to the conflict caused markets to rebound on March 31. European markets have entered a clear correction phase, with the EuroStoxx50 index down -9% since the start of the conflict. There is an underperformance of the DAX30, which has lost more than 10%, impacted by rising energy prices on industry.
