## Investment / Performance Objectives & policy

The fund mainly invests in government bonds denominated in euro. The fund generally favours direct investment but may at times invest through derivatives. Specifically, the fund normally invests at least 80% of total net assets in debt and debt-related instruments, including money market instruments, denominated in EUR. The credit rating and duration of securities are usually consistent with those of the benchmark.

The fund may invest in the following asset classes up to the percentages of total net assets indicated:

- corporate debt instruments: 20%

The fund does not invest in asset-backed securities or contingent convertible bonds (coco bonds), but may be indirectly exposed to them (maximum 10% of total net assets).

Non-EUR investments are hedged to EUR.

The fund may use derivatives for reducing risks (hedging) and costs, and to gain additional investment exposure.

For more information read the Prospectus or Key Information Document (KID).

## Risk and Reward Profile

The risk indicator assumes you keep the product for 4 years.

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you.

We have classified this product as 2 out of 7, which is a lower risk class.

This rates the potential losses from future performance at a low level, and poor market conditions are very unlikely to impact the capacity to pay you.

**For any further details on investment risks, please refer in particular to the Risks section of the Fund's Prospectus.**

## Investment Manager Commentary

### Performance and Investment Choices

The 3-5 years Euro Area Government Bonds gained +0.547% in January.

For the month of January, indicators offered signals of recovery vs December. The European Commission's ESI index rose to a three-year high of 99.4, suggesting GDP growth could accelerate toward around 0.4% q/q in Q1, while the composite PMI remained steady at 51.5, consistent with solid growth of about 0.3–0.4% q/q.

This resilience in growth mainly reflects the cumulative effect of the ECB's interest rate cuts, as well as the first visible impact of increased German government spending.

At a sectoral level, the final manufacturing PMI improved to 49.5 from 48.8 in December, signaling a move closer to stabilization, whereas the preliminary services PMI eased slightly to 51.9 (-0.5 points m/m), though it remained firmly in expansionary territory.

Performance across the 3–5-year EMU segment was positive across countries over the period. France led the group with a total return of +0.678%, followed by Belgium (+0.596%) and Italy (+0.568%), all overperforming the overall index. With a performance in the range +0.486% - +0.440%, Germany (+0.486%), Ireland (+0.477%), Netherlands (+0.471%), Finland (+0.466%), Spain (+0.452%) and Austria (+0.440%). Lagging behind, Portugal only gained +0.350%.

The fund maintains a slight long duration exposure relative to its benchmark, with positions primarily focused on Italy and Germany, also contrasting a slight short duration position on France.

The performance of the fund was in line with the one posted by the benchmark.
