Risk Indicator (SRI)

The risk indicator SRI rates this fund on a scale of 1 to 7. This indicator is used to assess the level of risk of this product in comparison to other funds and a category 1 rating does not mean that the investment is risk free. In addition, it indicates the likelihood that this product will incur losses in the event of market movements or our inability to pay you. This indicator assumes that you hold the product until the end of the recommended holding period of this fund. The actual risk may be very different if you choose to exit before the end of the recommended holding period of this Fund.

RISKS

The risks listed below are not exhaustive (Please refer to the prospectus for more details):

Equity risk

The value of a share may vary as a result of factors related to the issuing entity but also as a result of external, political or economic factors. Fluctuations in the equity and convertible bond markets, whose performance is in part correlated with that of the underlying equities, may lead to substantial variations in the net assets, which could have a negative impact on the performance of the Sub-fund's net asset value.

Interest rate risk

The exposure to interest rate products (debt securities and money market instruments) makes the UCITS sensitive to interest rate fluctuations. Interest rate risk might result in a fall in the value of the security and, therefore, the NAV of the UCITS in the event of a change in the yield curve.

Currency risk

The capital may be exposed to currency risk when its constituent securities or investments are denominated in a different currency from that of the Sub-fund. Currency risk is the risk of a fall in the exchange rate of the base currency of financial instruments in the portfolio against the Sub-fund's base currency, the euro, which may lead to a fall in the net asset value.

Equity Risks associated with small and mid caps

Securities of small- and mid-cap companies may be significantly less liquid and more volatile than those of largecap companies. As a result, the Sub-funds net asset value may fluctuate significantly and more rapidly.

Discretionary management risk

The discretionary management style is based on anticipating trends in the various markets (equities, bonds, money market, commodities and currencies). There is a risk that the sub-fund may not be invested in the best-performing markets at all times. The Sub-funds performance may therefore be lower than the investment objective, and a drop in its net asset value may lead to negative performance.

Inflation risk

The sub-fund will be exposed to risks linked to inflation, i.e. an overall rise in prices. The level of inflation affects changes in interest rates and therefore money market instruments.

DEFINITIONS AND METHODOLOGIES

The definitions and methodologies below are not exhaustive and are available in more detail at https://medianet.edmond-de-rothschild.fr/edram/pdf/Methodology_en.pdf and if applicable at <https://funds.edram.com/> in the fund's downloadable documentation.

Volatility : The volatility of a security is the difference between performance and average performance and therefore makes it possible to gauge the consistency of performance obtained. It comprises a measure of risk. If this is zero, the individual performances are identical. The higher it is, the greater the difference between individual performances.

Tracking error : The tracking error (available if the fund has a benchmark index) shows the volatility of a funds relative performance against that of its benchmark. It shows the difference between performances and their average and so makes it possible to gauge the consistency of relative performance. The lower the tracking error, the closer the fund's performance is to that of its benchmark.

Alpha : The alpha (available if the fund has a benchmark index) corresponds to the fund's average performance. More specifically, it measures the fund managers' added value while cancelling out market influence, which cannot be controlled. This measure is expressed as a percentage.

Sharpe ratio : The Sharpe ratio shows the fund's outperformance against a zero-risk interest rate, adjusted for fund volatility.

Transaction fees : Transaction costs represent the cost of buying and selling the underlying investments for this Product. The actual amount will vary depending on the volumes bought and sold. They remunerate the financial intermediaries involved in the chain of placing and processing orders on the market. This fee is not collected by the management company.

Management fees and other administrative or operating expenses : Ongoing charges represent the costs we incur each year in managing this Product. This percentage is based on the actual costs of the previous year. They remunerate all parties involved in the financial and administrative management of the fund.

Outperformance fees : Performance fees reward the financial management for its ability to generate outperformance. They are calculated by comparing the performance of the Products share with that of an indexed reference asset, over the relevant calculation period. This fee is payable even in the event of a decrease in the Net Asset Value, as long as this decrease is less than that of the benchmark index. The calculation method is described in the prospectus.
